satelettronica

Technical information should always be available to the foremen and mechanics, because their careful and constant adherence to the instructions is essential to ensure vehicle road-worthiness and safety. In addition, the normal basic safety precautions for working on motor vehicles must, as a matter of course, be observed.

4 Disconnecting and reconnecting battery

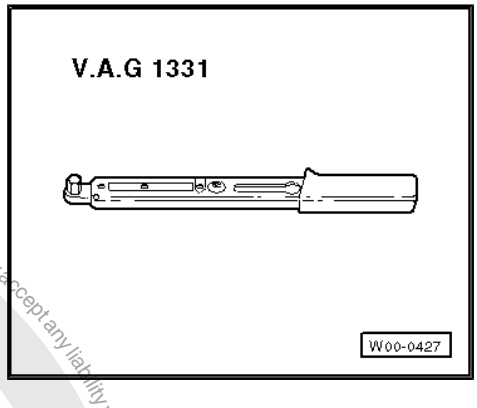
4.1 Disconnecting and reconnecting battery

Note

Disconnecting the battery earth strap (open circuit) provides a safe working environment for repairs to the electrical system. The battery positive wire need only be disconnected for removal of the battery. However, observe the notes on disconnecting the battery in any case.

Special tools and workshop equipment required

- Torque wrench -V.A.G 1331-



Disconnecting battery

– Switch off ignition and all electrical consumers and remove ignition key.

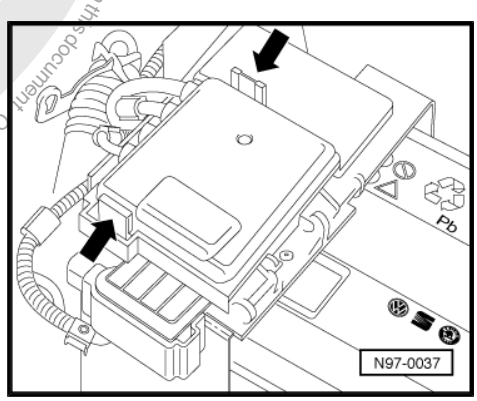
– Disconnect battery earth strap on battery negative terminal first.

Note

To disconnect the battery positive wire, first remove the fuse holder on the battery.

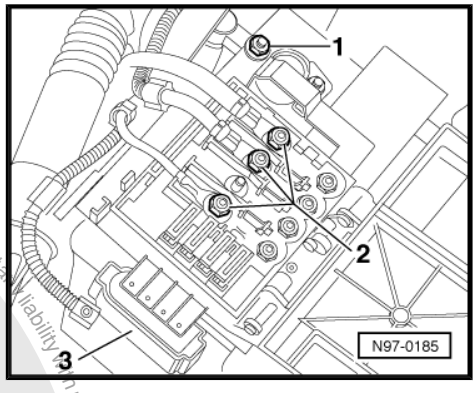
Removing fuse holder on battery:

– Press locking lugs -arrows- together to open fuse holder and take off cover.

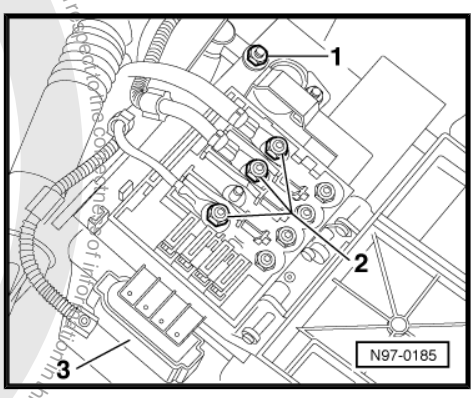


Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

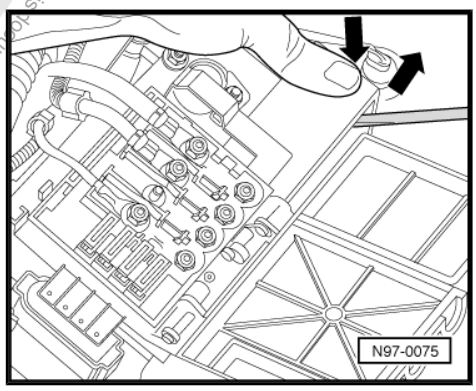
– Unscrew securing nut -1- and current conductor plate on positive battery clamp.



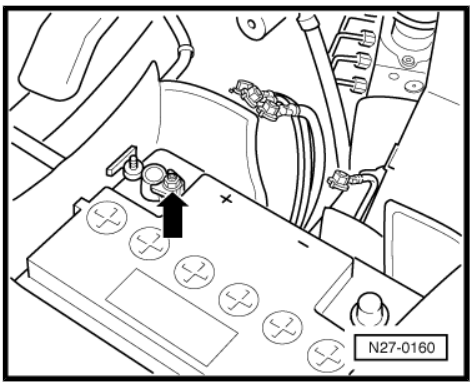
– Remove securing nuts -2- to disconnect wiring to strip fuses.
– Disconnect connector -3-.



– Release tension on fuse holder spring catch by pressing down with a thumb and lever spring catch locking device off battery using a suitable screwdriver.
– Remove fuse holder upwards off battery.



– Then release the battery positive terminal clamp securing bolt -arrow-.



Connecting battery:

Note

- *Battery terminal clamps must be fitted only by hand without force to prevent damage to battery housing.*
- *Battery terminals must not be greased.*

– Fit positive cable clamp onto battery positive terminal.

Protected by copyright. Copyright by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG. This document is not permitted unless authorised

– Tighten battery positive terminal clamp securing bolt -arrow- to 6 Nm.

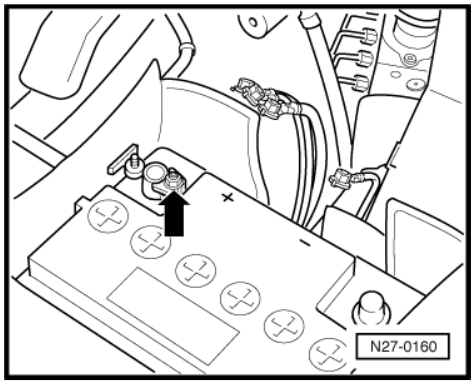
Installing fuse holder on battery:

– Fit fuse holder onto battery, when doing this fit current conductor plate onto retaining pins on battery positive terminal.

– Engage fuse holder spring catch in battery.

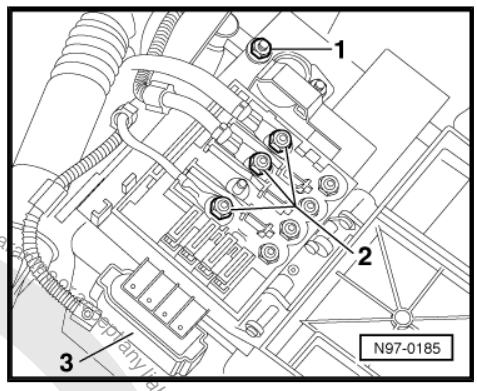
– Tighten securing bolt to 6 Nm.

– Close heat insulation jacket if necessary.



– Tighten securing nuts -1- and secure current conductor plate on positive terminal clamp to 6 Nm.

– If wiring was disconnected, reconnect again to strip fuses and then tighten securing bolts -2- to 6 Nm.



Note

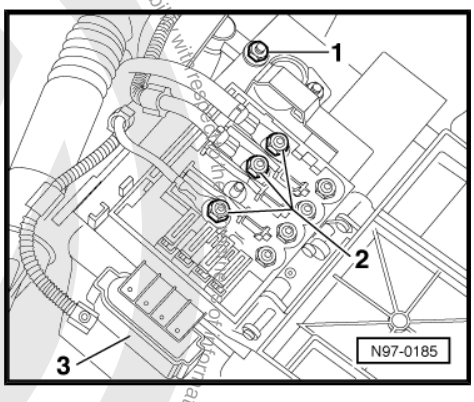
See pin assignment in appropriate current flow diagram! ⇒ Current flow diagrams, Electrical fault finding and Fitting locations

– Reconnect connector -3-.

– Fit fuse holder cover and close.

– Reconnect negative terminal clamp to battery negative terminal and tighten to 6 Nm.

– Perform steps according to table ⇒ page 6 .



4.1.1 Steps after connecting battery

Procedures after reconnecting battery:

Procedure	Performed
Ignition with ignition key: switch on ignition and then switch off again.	
Read fault memory: ⇒ Guided fault finding using VAS 5051A .	
Clock : Check settings and adjust if necessary.	
Window regulators: fully open all windows and close again, actuate switch again in “Close” position and hold until control unit switches.	
Functional check: check all electrical consumers.	

Table can be printed out if necessary.

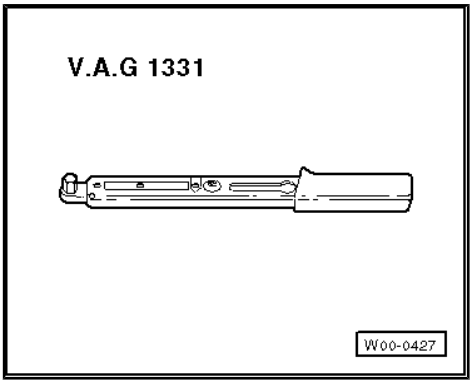
Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee the accuracy of any data, with respect to the information in this document. Copyright by Volkswagen AG.
satelettronica

5 Removing and installing battery

5.1 Removing and installing battery

Special tools and workshop equipment required

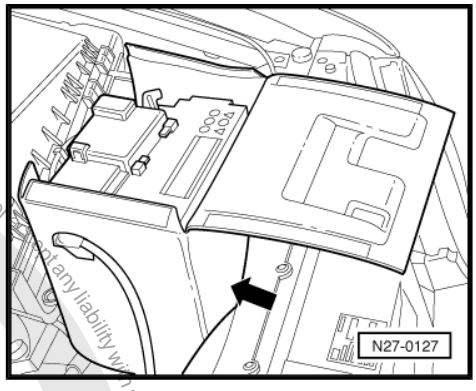
- Torque wrench -V.A.G 1331-



Removing battery

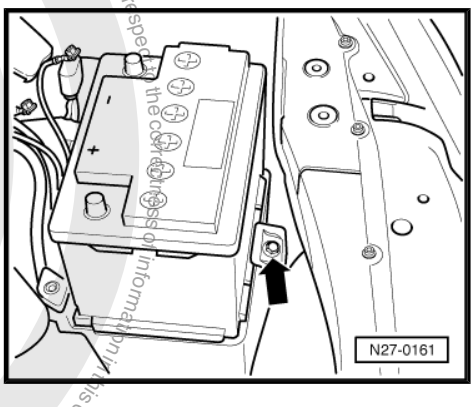
– Disconnect battery ⇒ page 4 .

– The battery heat insulation jacket -arrow- can be opened and removed (if fitted) once the battery positive clamp has been loosened and removed from the battery positive terminal.



– Remove hexagon bolt M8×25 -arrow-.

– Remove battery securing bracket.



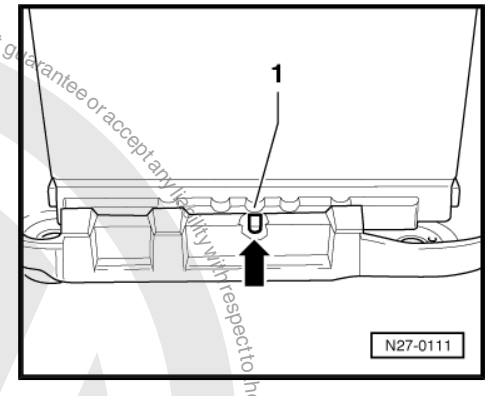
Installing battery

To guarantee the battery seats securely, only install batteries with a 10.5 mm battery foot strip and adhere to the following procedures:

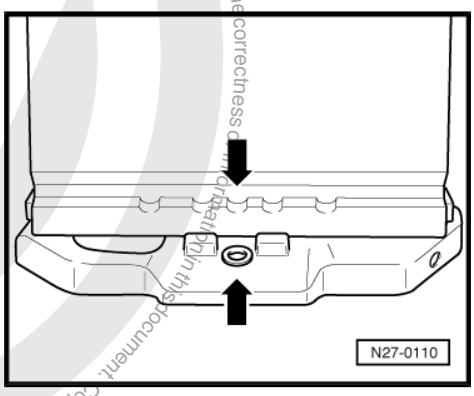
Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or assume any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

– Install battery so that the lug of the battery carrier -arrow- engages in the battery base strip recess -1-.

It must not be possible to move a battery to the left or to the right.



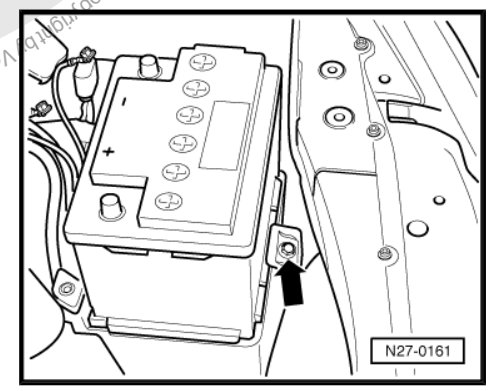
The battery is inserted correctly when the centre recess in the battery foot strip aligns with threaded hole in the battery carrier -arrows-.



– On batteries with a hose for central venting ensure that the hose is not pinched. Only then can the battery vent freely.

– Ensure that the opening on the upper side of the battery cover is not blocked on batteries without a hose for central venting.

– Install retaining bracket and tighten M8×25 securing bolt -arrow- to 22 Nm.



– Reinstall heat insulation jacket, if necessary.

– After installing, check that battery is seated securely. A loosely fitted battery creates the following dangers:

♦ Shortened service life due to damage from vibration (danger of explosion)

♦ The plates in the battery cells will be damaged if the battery is not secured correctly.

♦ Damage to battery housing by securing bracket (possibility of acid leaking, with high consequential costs)

♦ Poor crash safety

– Connecting battery ⇒ page 4 .

Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG.
satelettronica

6 Starter

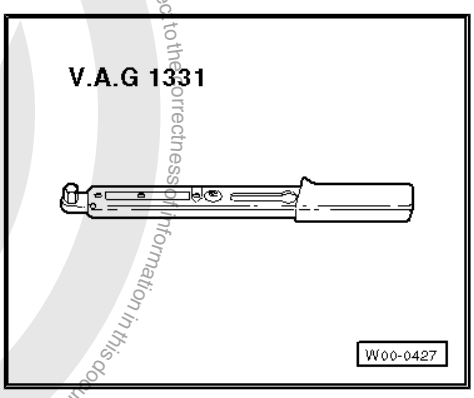
Note

- *If the vehicle has a radio with anti-theft coding, obtain code before disconnecting battery.*
- *To disconnect and reconnect the battery, the procedure described in the workshop manual should be strictly adhered to* *⇒ page 4* *.*
- *Notes concerning the removal and installation of the starter bush can be found in ⇒ Rep. Gr. 34 , ⇒ Rep. Gr. 37 .*

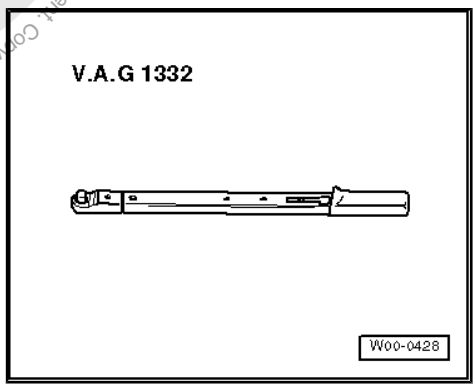
6.1 Removing and installing starter (petrol engine)

Special tools and workshop equipment required

- Torque wrench -V.A.G 1331-



- Torque wrench -V.A.G 1332-

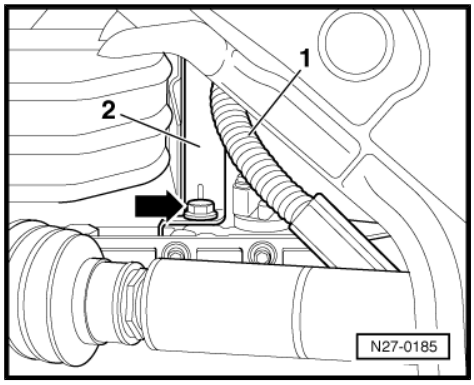


Removing:

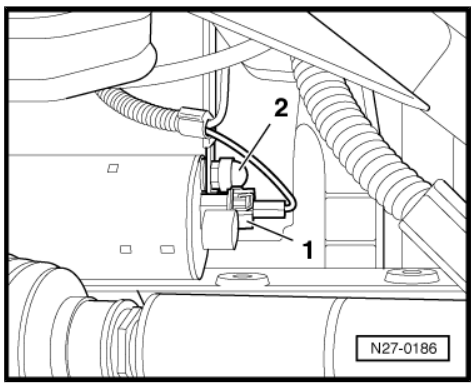
– Disconnect earth strap at battery.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

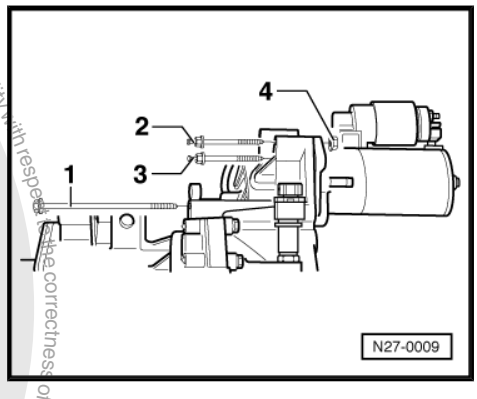
– Unclip line -1- from bracket -2-.
– Unscrew hexagon bolt -3- and remove bracket -2-.



– Release terminal 50 connector -1- and pull disconnect.
– Remove plastic cap -2- and disconnect wire from solenoid switch terminal 30.



– Remove hexagon bolt -1-.
– Remove hexagon nut -4-.



Note

On some vehicles the bolts -2- and -3- are secured with a clip.

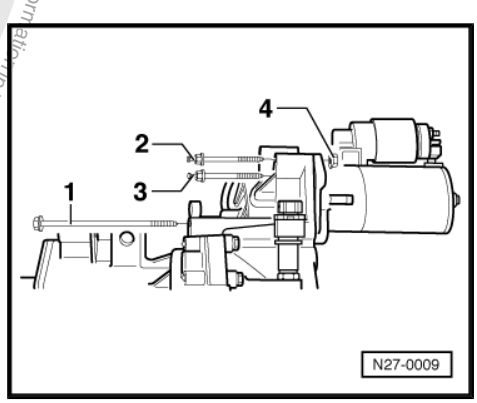
– Unscrew hexagon bolt -3- and remove bolt -2-.
– Take starter out downwards.

Installing:

– Insert starter.

Insert hexagon bolts -1- and -3- and tighten hand-tight.
– Insert hexagon bolt -2- and tighten hexagon nut -4- hand-tight.
– Tighten hexagon bolts -1- and -3- and hexagon nut -4-.

Specified torques ⇒ Rep. Gr. 34 ; Removing and installing engine



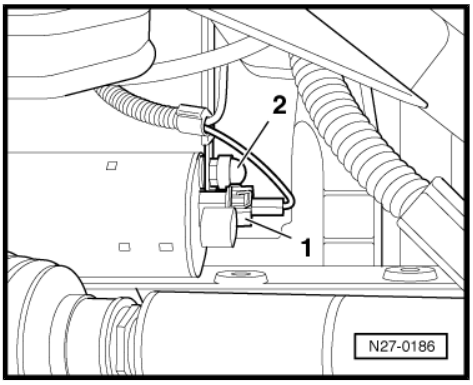
Note

If necessary, secure bolts -2- and -3- with a clip.

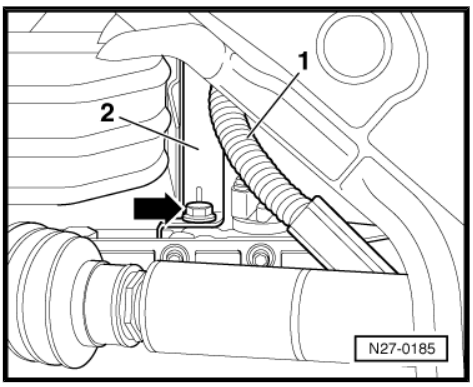
Copyright by Volkswagen AG. Protected by copyright. Copyright is valid for commercial purposes, in part or in whole, not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document.

satelettronica

– Reconnect terminal 50 connector -1-.
– Tighten wire terminal from solenoid switch (terminal 30) to 13 Nm and fit plastic cap -2-.



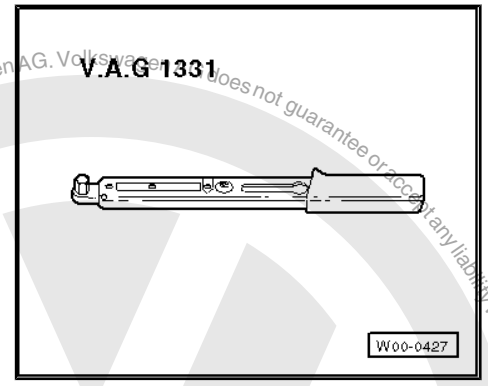
– Install bracket -2- and tighten hexagon bolt -arrow-.
– Clip line -1- into bracket -2-.



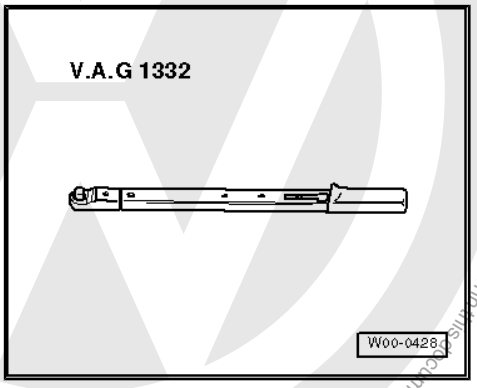
6.2 Removing and installing starter (diesel engine)

Special tools and workshop equipment required

♦ Torque wrench -V.A.G 1331-



♦ Torque wrench -V.A.G 1332-



Removing:

– Disconnect earth strap at battery.

satelettronica
Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.

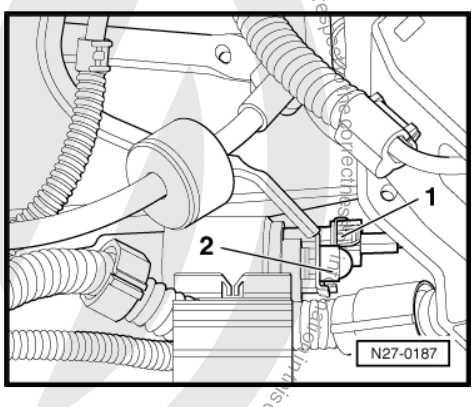
Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.

Note

On vehicles with 3-cylinder diesel engine, it may be necessary to remove the vibration damper of selector mechanism in order to remove the starter. On these vehicles, the cable duct must also be unclipped and laid aside.

– Release terminal 50 connector -1- and pull disconnect.

– Remove plastic cap -2- and disconnect wire from solenoid switch terminal 30.



– Remove retainer -1- for coolant hose.

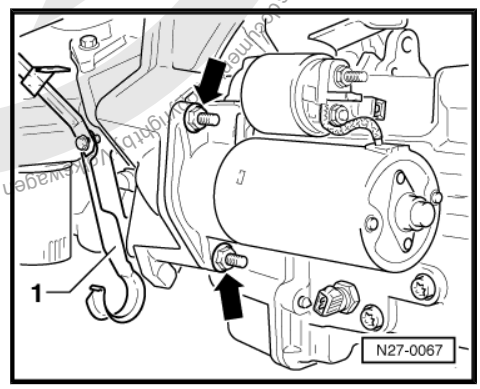
– Remove studs -arrows-.

– Take starter out upwards.

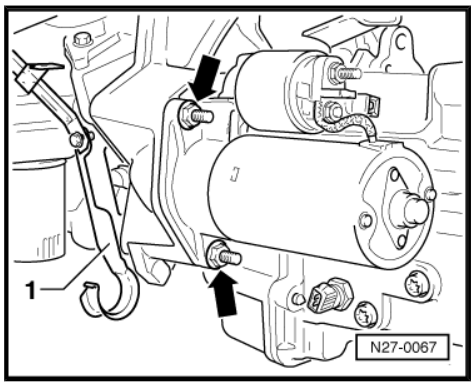
Installing:

– Insert starter.

– Tighten studs -arrows-.



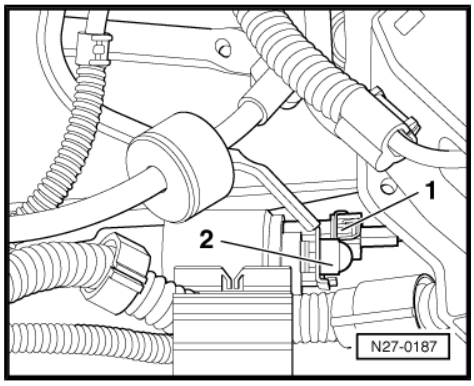
Specified torques ⇒ Rep. Gr. 34 ; Removing and installing engine



– Reconnect terminal 50 connector -1-.

– Tighten wire terminal on solenoid switch (terminal 30) to 13 Nm and fit plastic cap -2-.

– If necessary, install vibration damper of selector mechanism and clip in cable duct.



satelettronica

7 Removing and installing alternator with poly V-belt

Note

- *To disconnect and reconnect the battery, the procedure described in the workshop manual should be strictly adhered to* ⇒ page 4 .
- *If the vehicle has a radio with anti-theft coding, obtain code before disconnecting battery.*
- *When the battery is reconnected, check the vehicle equipment (radio, clock, window regulators) as per Workshop Manual and/or the Owner's Manual.*
- *Checking alternator ⇒ Current flow diagrams, Electrical fault finding and Fitting locations.*

7.11 Checking V-belt

– Check for:

- Sub-surface cracks (cracks, core ruptures, cross sectional breaks)
- Layer separation (top layer, cord strands)
- Base break-up

Protected by copyright. Copyright by Volkswagen AG.
Copyright by Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document.
Copy for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG.
satelettronica

- Fraying of cord strands
- Flank wear (material wear, frayed flanks, flank brittleness - glassy flanks-, surface cracks)
- Traces of oil and grease

Note

- *Mark direction of rotation before removing the V-belt. Ensure rotation of direction is correct when installing. Installing V-belt opposite to the direction of rotation will destroy the belt!*
- *If damage is established, replace V-belt immediately to prevent failure or functional faults!*

7.12 Removing and installing poly V-belt

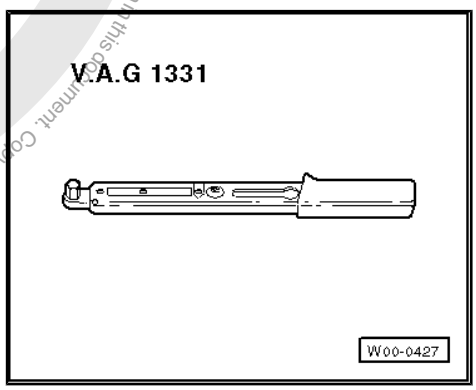
Note

- *If the used poly V-belt is to be reinstalled, then mark the direction of rotation before removing the poly V-belt. When reinstalling, ensure the poly V-belt is installed in the correct direction of rotation. Installing the poly V-belt opposite to the direction of rotation will destroy the belt!*
- *It is not necessary to adjust the poly V-belt tension, as a spring loaded tensioner guarantees the best possible belt tension.*

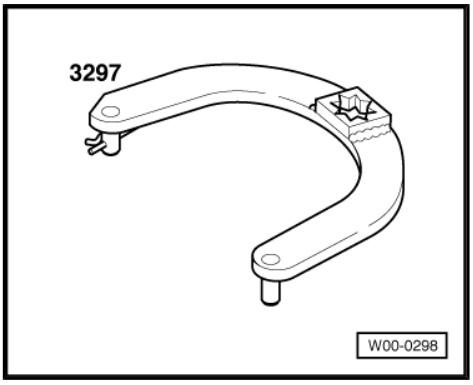
7.12.1 4-cylinder fuel injection engine with basic belt drive

Special tools and workshop equipment required

- Torque wrench -V.A.G 1331-



- Tensioning arm -3297-



Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

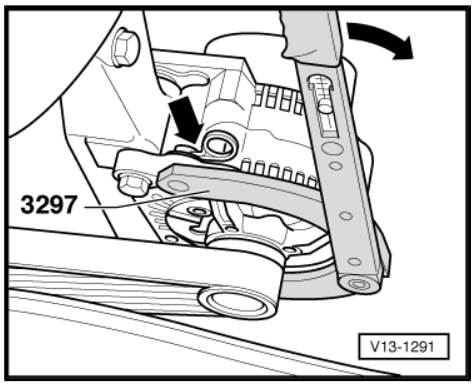
Removing poly V-belt:

– Mark direction of rotation of poly V-belt if it is to be reused.

– Loosen alternator securing bolts at least one turn.

– Fit tensioning lever -3297- , secure with pin -arrow- and pivot alternator downwards (to operate tensioning lever 3297, use e.g. torque wrench -V.A.G 1331-).

– Remove poly V-belt.



Installing poly V-belt:

Note

- *When installing used poly V-belts observe the direction of rotation marked on removal!*
- *When fitting belt, ensure that poly V-belt seats correctly in pulleys!*

– Fit poly V-belt to crankshaft pulley/vibration damper first. Alternator belt pulley remains free.

– Lower alternator with tensioning lever -3297- and place poly V-belt on alternator pulley.

– Push alternator down at least 3 times onto stop with tensioning lever -3297- to ensure the alternator moves freely.

– After fitting poly V-belt, and with alternator loose, rotate engine several times (approx. 10 revolutions of engine), to do this operate starter briefly, but do not start engine.

Note

When tightening keep to the sequence given, do not use the alternator for support and do not touch poly V-belt.

– Tighten alternator lower securing bolt first and then upper securing bolt to 25 Nm.

– Start engine and check belt running.

7.12.2 4-cylinder fuel injection engine with air conditioner compressor and power assisted steering vane pump

Removing poly V-belt:

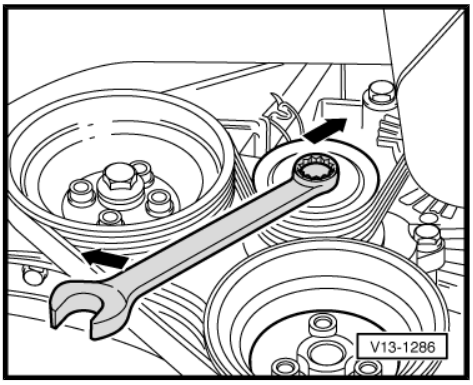
– Remove cover for poly V-belt.

– Mark direction of rotation of poly V-belt if it is to be reused.

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

– Using a spanner on the securing bolt, swivel tensioning roller in direction of arrow.

– Remove poly V-belt.



Installing poly V-belt:

Note

♦ *When installing used poly V-belts observe the direction of rotation marked on removal!*

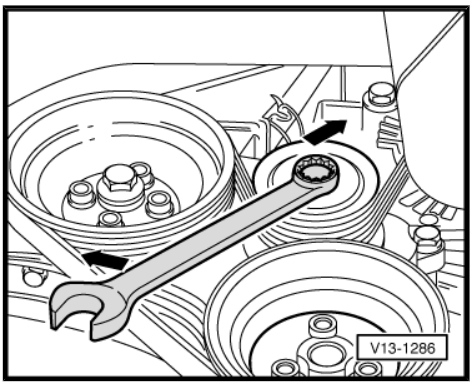
♦ *Before installing poly V-belt, ensure that all ancillaries (alternator, air conditioner compressor, vane pump) are secure.*

♦ *When fitting belt, ensure that poly V-belt seats correctly in pulleys!*

– Using a spanner on the securing bolt, swivel tensioning roller in direction of arrow.

– Place poly V-belt onto crankshaft/vibration damper pulley first. Fit belt onto tensioning roller last.

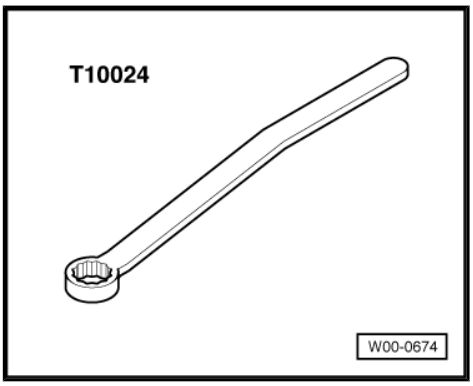
– Start engine and check belt running.



7.12.3 4-cylinder diesel engine

Special tools and workshop equipment required

♦ Ring spanner -T10024-



Removing poly V-belt:

– Remove noise insulation.

– Mark direction of rotation of poly V-belt if it is to be reused.

Copyright by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG. Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG.
satelettronica

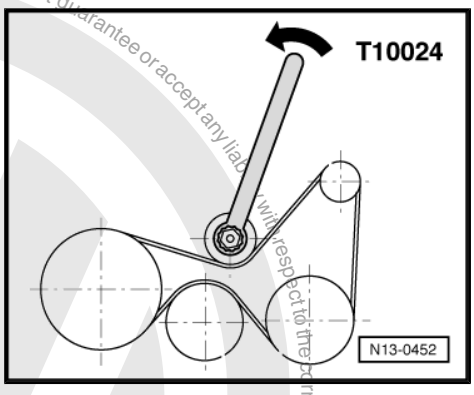
– Swivel tensioning roller on tensioning lever in direction of arrow.
– Remove poly V-belt.

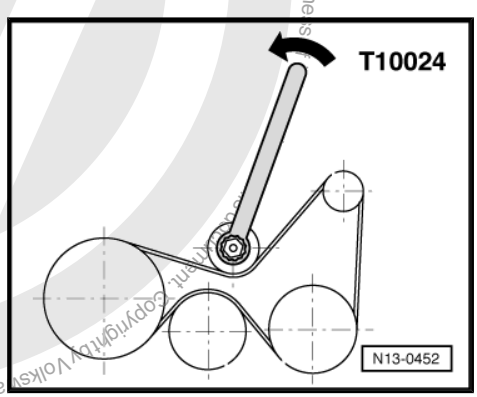


Installing poly V-belt:

Note

- *When installing used poly V-belts observe the direction of rotation marked on removal!*
- *When fitting belt, ensure that poly V-belt seats correctly in pulleys!*

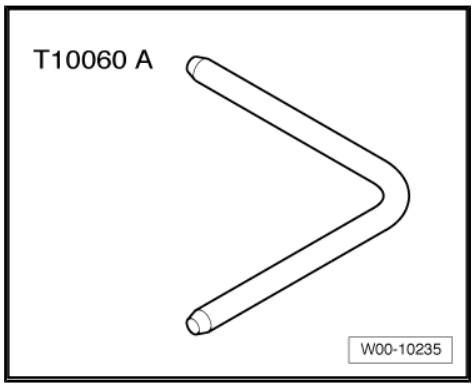
– Swivel tensioning roller on tensioning lever in direction of arrow.
– Fit poly V-belt.
– Start engine and check belt running.
– Install noise insulation.



7.12.4 3-cylinder diesel engine

Special tools and workshop equipment required

- Locking pin -T10060 A-

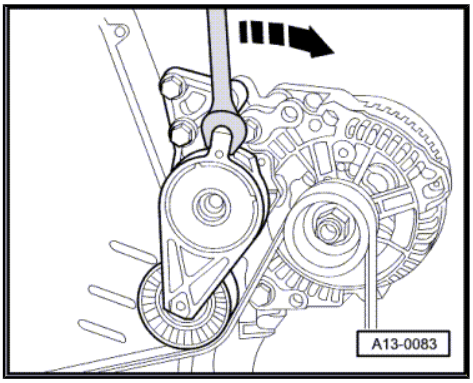


Removing poly V-belt:

– Remove noise insulation.
– Remove the intake suction hose/charge air cooler connecting pipe and air mass meter.
– Mark direction of rotation of poly V-belt.

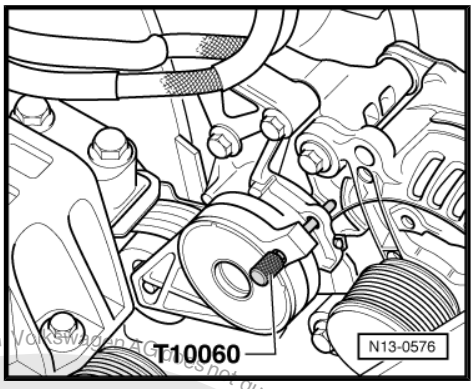
satelettronica

– To slacken poly V-belt, turn tensioning element in direction of arrow.



– Lock tensioning element using locking pin -T10060 A- .

– Remove poly V-belt.



Installing poly V-belt:

Installation is carried out in the reverse order. When installing observe the following:

Note

- *Before installing poly V-belt, ensure that all ancillaries (alternator, air conditioner compressor, vane pump) are secure.*
- *When installing poly V-belt observe direction of rotation and correct seat of belt.*
- *On vehicles without air conditioning system, fit poly V-belt on alternator last.*
- *On vehicles with air conditioning system, fit poly V-belt on air conditioner compressor last.*

On completing work:

– Start engine and check belt running.

7.13 Compact alternator with poly V-belt drive, vehicles ▸ 04.99

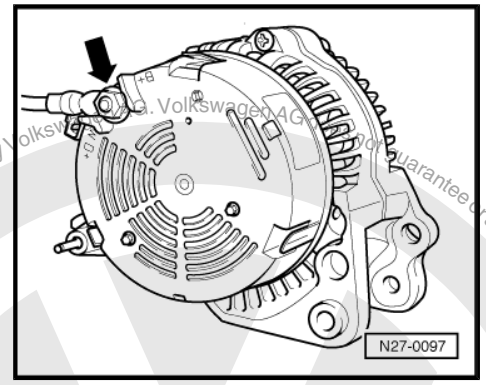
7.13.1 Securing B+ (battery positive) wire to alternator

Note

- *If the B+ wire is not tightened to the specified torque setting, the following may occur:*
- *The battery will not be charged fully.*
- *Vehicle electrics or electronics fail completely (breakdown).*
- *Danger of fires from sparks*
- *Damage to electronic components and control units due to excessive voltage*

Protected by copyright. Copyright by Volkswagen AG. Copyright by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG. Copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG.
satelettronica

The torque setting for the B+ wire -arrow- securing nut is 15 Nm.

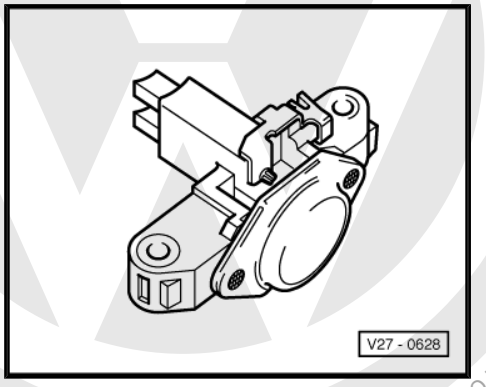


7.14 Checking carbon brushes for alternator, vehicles ▸ 04.99

Length of new carbon brushes = 12 mm

Wear limit = 5 mm

Carbon brush tolerance to one another = 1mm

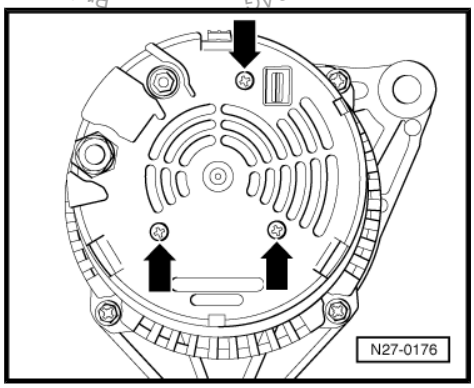


7.15 Removing and installing voltage regulator for alternator, vehicles ▸ 04.99

– Unscrew protective cap securing bolts -arrows- and remove protective cap.

– Remove voltage regulator securing screws and remove voltage regulator.

Installation is carried out in the reverse sequence.



7.16 Compact alternator with poly V-belt drive, vehicles 05.99 ▸

From 05.99 compact alternators with a revised shape and different terminal designation have been introduced.

External distinguishing features of new compact alternators compared to the previously used compact alternators are:

- Revised voltage regulator
- Oval, radially sealed socket for 2-pin connector housing instead of previous square 2-pin connector
- Revised terminal designation for connections ⇒ Current flow diagrams, Electrical fault finding and Fitting locations

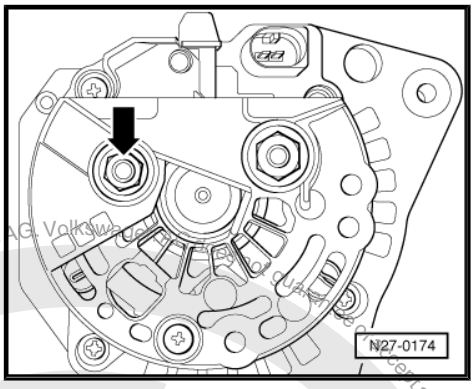
Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

7.16.1 Securing B+ (battery positive) wire to alternator

Note

- *The threaded connection for the + wire on the compact alternator is designated B1+!*
- *If the B1+ wire is not tightened to the specified torque setting, the following may occur:*
- *The battery will not be charged fully.*
- *Vehicle electrics or electronics fail completely (breakdown).*
- *Danger of fires from sparks*
- *Damage to electronic components and control units due to excessive voltage*

The torque setting for the securing nut of B1+ wire -arrow- is 15 Nm.

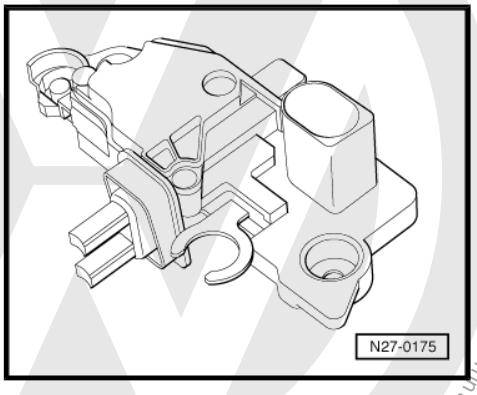


7.17 Checking carbon brushes for alternator, vehicles 05.99 ▸

Length of new carbon brushes = 12 mm

Wear limit = 5 mm

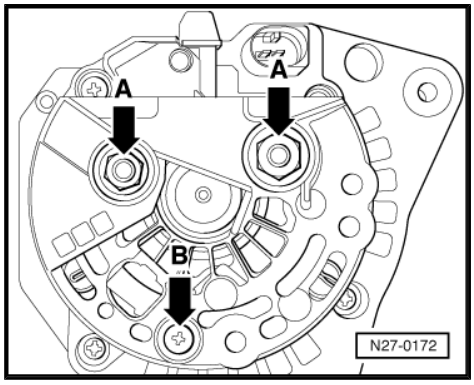
Carbon brush tolerance to one another = 1mm



Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

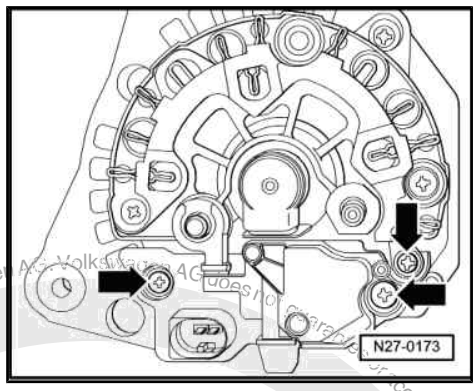
7.18 Removing and installing voltage regulator for alternator, vehicles 05.99 ▸

– Unscrew securing nuts -arrows A- and remove securing bolt -arrow B- for protective cap and remove protective cap.



– Remove voltage regulator securing bolt -arrows- and remove voltage regulator.

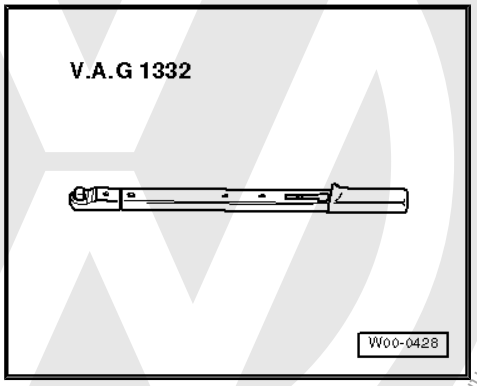
Installation is carried out in the reverse sequence.



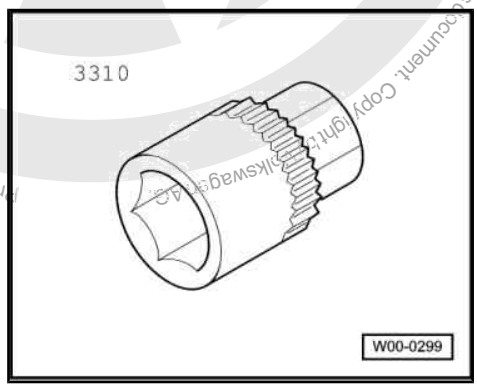
7.19 Removing and installing poly V-belt pulley without freewheel

Special tools and workshop equipment required

♦ Torque wrench -V.A.G 1332-



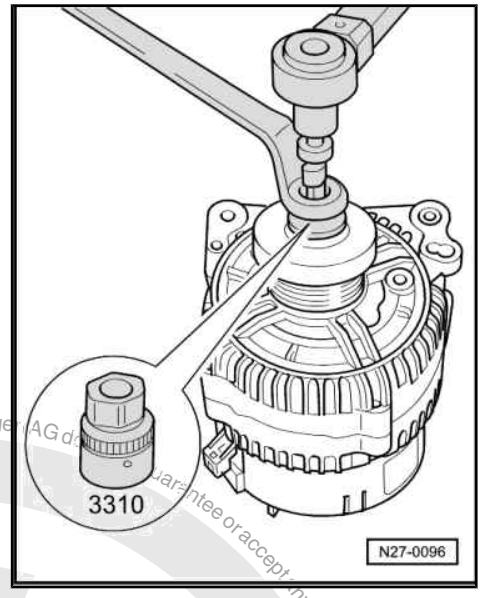
♦ Socket -3310-



satelettronica

Use socket drive 3310 to loosen or tighten poly V-belt pulley on alternator.

The torque setting for the securing nut of the poly V-belt pulley is 65 Nm.



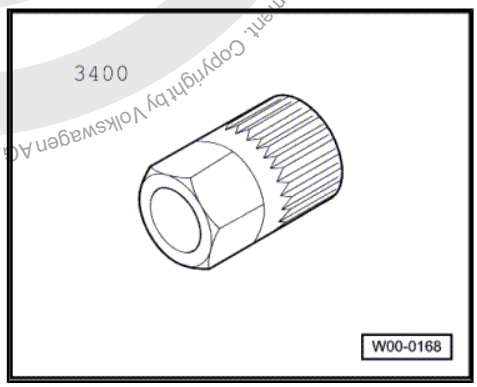
7.20 Removing and installing poly V-belt pulley with freewheel

Note

- *A poly V-belt pulley with freewheel can be retrofitted in vehicles fitted with a Bosch alternator ‣ 04.99.*
- *A poly V-belt pulley with freewheel can be retrofitted in vehicles fitted with a Valeo alternator ‣ 04.99.*
- *Valeo alternators must be renewed completely for a Bosch alternator.*
- *On alternators 05.99 ‣ the poly V-belt pulley with freewheel is the same on all alternators used (different manufacturers).*

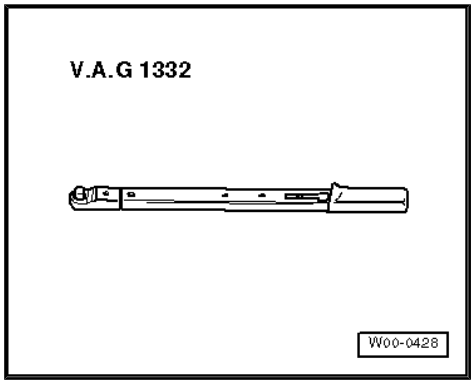
Special tools and workshop equipment required

- Multipoint adapter -VAS 3400-



Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

♦ Torque wrench -V.A.G 1332-



Removing:

– Remove alternator.

– Clamp alternator on bracket points in bench vice.

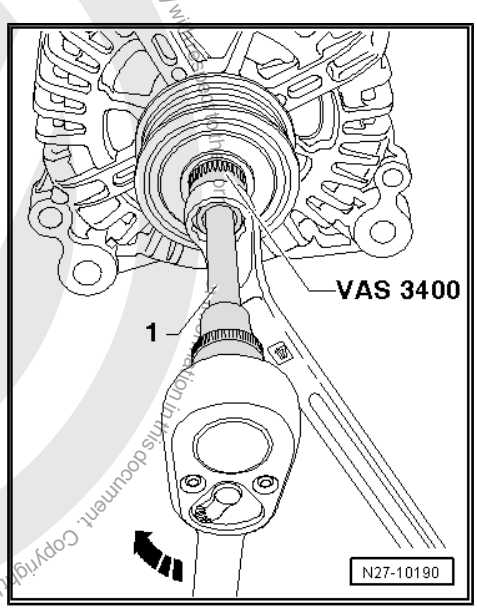
– Remove protective cap from poly V-belt pulley with freewheel.

– Insert multi-point adapter -VAS 3400- with ring spanner 17 mm in poly V-belt pulley with freewheel of alternator.

– Insert a M10 multi-point bit -1- into alternator shaft.

– Hold alternator shaft and loosen poly V-belt with freewheel using a ring spanner and turning it anti-clockwise.

– Hold poly V-belt pulley with freewheel by hand. Turn alternator drive shaft until poly V-belt pulley with freewheel can be removed.



Installing:

Install in the reverse order of removal. When doing this, note the following:

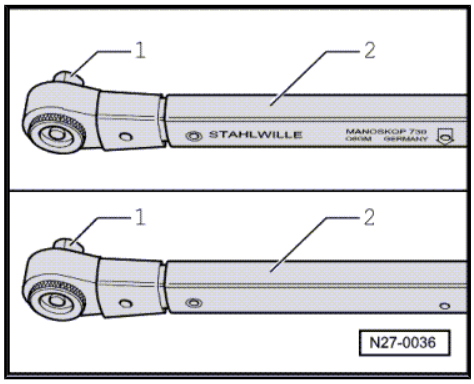
– First screw poly V-belt pulley with freewheel on drive shaft of alternator by hand as far as limit stop.

The torque wrench -V.A.G 1332- must be modified for assembly of poly V-belt with freewheel as follows:

– Release socket drive -1- and pull off grip -2-.

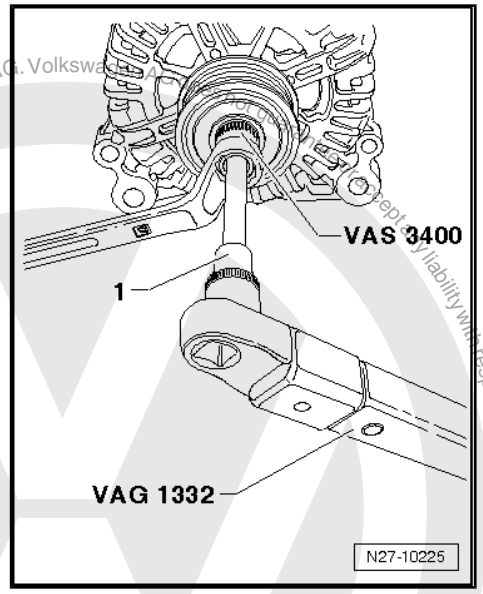
– Turn grip -2- of torque wrench through 180 degrees and reinsert socket drive.

– Set turning direction of torque wrench to anti-clockwise on socket drive.



satelettronica

– Insert a M10 multi-point bit -1- into alternator shaft.
– Counterhold using multi-point adapter -VAS 3400- and ring spanner 17 mm.
– Tighten poly V-belt with freewheel by turning drive shaft of alternator clockwise using torque wrench -V.A.G 1332- .
– Tighten threaded connection to specified torque of 80 Nm.



Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.

90 – Gauges, instruments

1 Dash panel insert for vehicles ▸ 1997

1.1 Removing and installing dash panel insert

Note

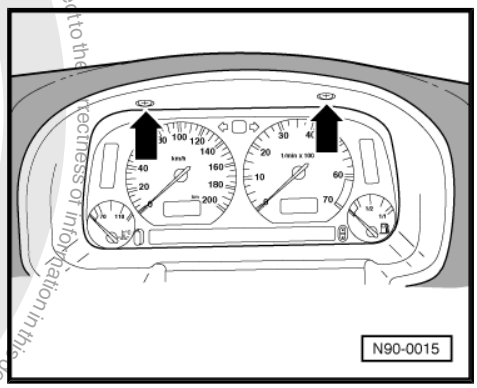
- *To disconnect and reconnect the battery, the procedure described in the workshop manual should be strictly adhered to* *⇒ page 4* *.*
- *When the battery is reconnected, check the vehicle equipment (radio, clock, window regulators) as per Workshop Manual and/or the Owner's Manual.*
- *There is no need to remove the steering wheel. For ease of illustration the steering wheel is not shown in the following illustrations.*

Removing:

– Disconnect battery ⇒ page 4 .

– Remove upper securing bolts -arrows-.

– Then plastic trim can be pulled out backwards.

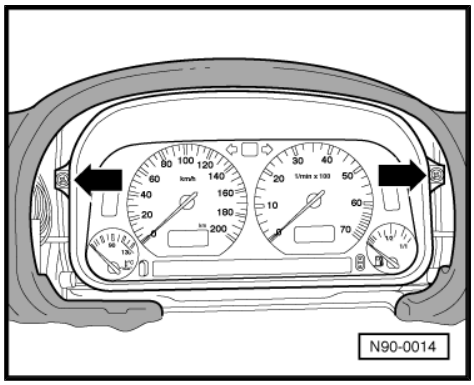


– Remove the two securing bolts on left and right -arrows-.

– Fold dash panel insert out backwards.

– Disconnect multi-pin connector on back of dash panel insert.

– Take out dash panel insert.



Installing:

Installation is carried out in reverse order of removal.

1.4 Dash panel insert (MOTOMETER) warning lamp symbols

Note

- *The warning lamp arrangement in the dash panel insert is dependent upon the equipment level, engine and country version of the vehicle.*
- *If, due to an incorrect assignment of warning lamps, a warning lamp symbol which does not belong to the equipment variant lights up, this incorrect assignment is to be corrected using the following description.*

1 - Left turn signal

2 - Main beam

3 - Right turn signal

4 - Fuel gauge

5 - Fog lights

6 - Anti-lock brake system (ABS)

7 - Brake wear warning

8 - Brake test / brake system fault warning

9 - Glow period check

10 - Alternator

11 - Oil pressure

12 - Airbag

13 - Turn signal repeater / side light check

14 - Rear fog light

2 Dash panel insert for vehicles 1998 ▸

Fault detection and fault display

The dash panel insert is equipped with self-diagnosis, which makes fault finding easier.

Use -VAS 5051- vehicle diagnostic, testing and information system -V.A.G 1551- for fault finding.

Carry out self-diagnosis of dash panel insert ⇒ Electrical system, self-diagnosis; Rep. Gr. 01 ; Carrying out self-diagnosis of dash panel insert for vehicles 1998 ▸ 09.99; Carrying out self-diagnosis .

2.1 Renewing dash panel insert

Note

If replacing dash panel insert: first read the values for service interval display and odometer before removing the dash panel insert.

– Read service interval display values and distance recorder with vehicle diagnostic, testing and information system -VAS 5051- or fault reader -V.A.G 1551- and note the values ⇒ Electrical system, self-diagnosis; Rep. Gr. 01 ; Self-diagnosis of the dash panel insert for vehicles 1998 ▸ ; Service interval data when renewing dash panel insert .

– Remove old dash panel insert and install new one ⇒ page 43 .

– Adapt the values for the service interval display and for the distance recorder ⇒ Electrical system, self-diagnosis; Rep. Gr. 01 ; Adapting service interval data when changing the dash panel insert for vehicles 1998 ▸ 09.99; Service interval display when renewing dash panel insert .

2.2 Removing and installing dash panel insert

Note

- *To disconnect and reconnect the battery, the procedure described in the workshop manual should be strictly adhered to* *⇒ page 4*.
- *When the battery is reconnected, check the vehicle equipment (radio, clock, window regulators) as per Workshop Manual and/or the Owner's Manual.*
- *If dash panel insert is to be renewed* *⇒ page 43* .
- *The steering wheel must be removed to remove the dash panel insert.*

Removing:

– Disconnect battery ⇒ page 4 .

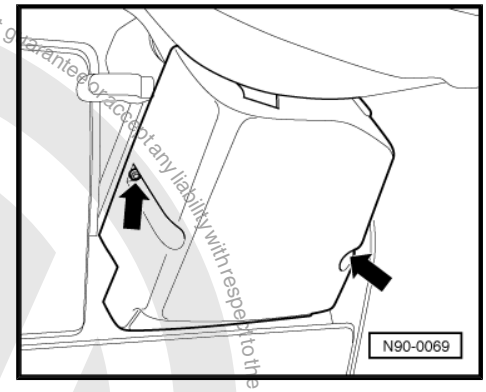
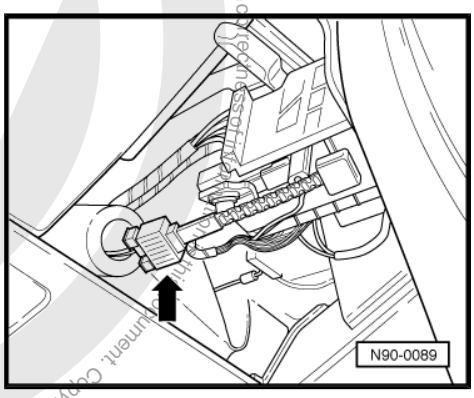
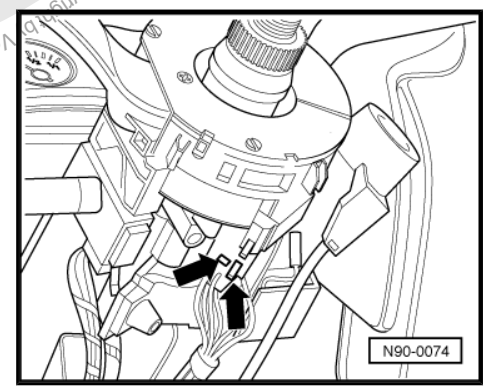
– To remove the lower trim of the steering column switch, remove both cross-head screws -arrows-.
– Removing lower steering column trim
– Remove driver side airbag ⇒ General body repairs, interior; Rep. Gr. 69 .
– Remove steering wheel ⇒ Running gear, axles, steering; Rep. Gr. 48 ; Airbag, steering wheel, steering column .



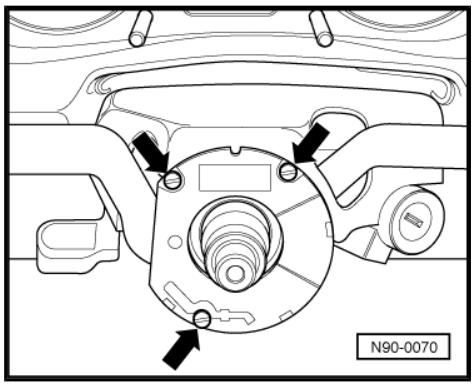
– Pull back foam envelope and disconnect airbag coil connector -arrow-.
– Removing upper steering column trim



– Disconnect 2 connectors -arrow- from steering column switch for turn signals, main and dipped beam.

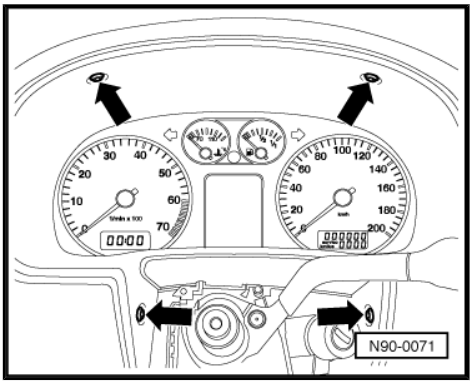


– Remove securing bolts -arrows-.
– Steering column switch for turn signals, main and dipped beam, headlight flasher and parking light
– Release steering wheel height adjustment and secure steering column in lower position.



satelettronica

– Remove 4 bolts -arrows-.
– Unscrew trim frame backwards.



– Remove 2 bolts -arrows-.
– Swing dash panel insert backwards and unclip from lower pivot bearings.
– Release connector and pull off from dash panel insert.
– Take out dash panel insert.

Installing:

Installation is carried out in reverse order of removal.

3 Dash panel insert for vehicles 10.99 ▸

Fault detection and fault display

The dash panel insert is equipped with self-diagnosis, which makes fault finding easier.

Use -VAS 5051- vehicle diagnostic, testing and information system -V.A.G 1551- for fault finding.

Carry out self-diagnosis of dash panel insert ⇒ Electrical system, self-diagnosis; Rep. Gr. 01 ; Carrying out self-diagnosis of dash panel insert for vehicles 10.99 ▸ 09.99; Carrying out self-diagnosis .

3.1 Renewing dash panel insert

Note

If replacing dash panel insert: first read the values for service interval display and odometer before removing the dash panel insert.

- Read service interval display values and distance recorder with vehicle diagnostic, testing and information system and note the values ⇒ Electrical system, self-diagnosis; Rep. Gr. 01 ; Self-diagnosis of the dash panel insert for vehicles 10.99 ▸; Service interval data when renewing dash panel insert .
- Remove old dash panel insert and install new one ⇒ page 52 .
- Adapt the values for the service interval display and for the distance recorder ⇒ Electrical system, self-diagnosis; Rep. Gr. 01 ; Adapting service interval data when changing the dash panel insert for vehicles 10.99 ▸ 09.99; Service interval display when renewing dash panel insert .

3.2 Removing and installing dash panel insert

Note

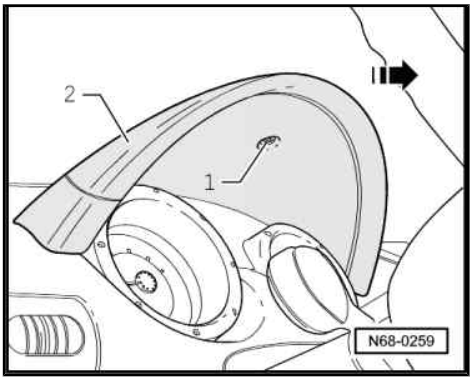
- *To disconnect and reconnect the battery, the procedure described in the workshop manual should be strictly adhered to* *⇒ page 4* .
- *When the battery is reconnected, check the vehicle equipment (radio, clock, window regulators) as per Workshop Manual and/or the Owner's Manual.*
- *If dash panel insert is to be renewed* *⇒ page 43* .
- *The steering wheel must be removed to remove the dash panel insert.*

3.2.1 Removing dash panel insert

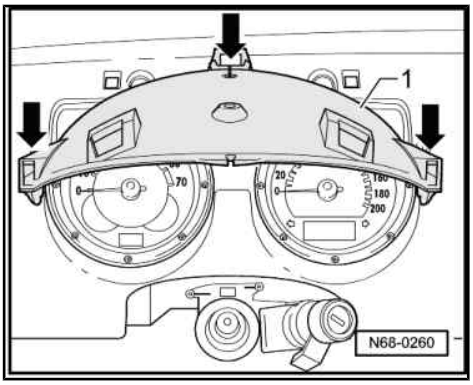
- Disconnect battery ⇒ page 4 .
- Remove steering wheel ⇒ Running gear, axles, steering; Rep. Gr. 48 ; Airbag, steering wheel, steering column .

satelettronica

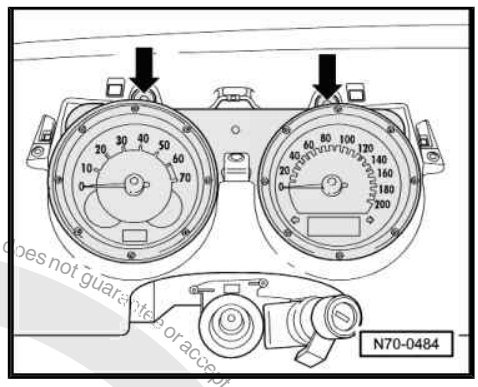
– Remove dash panel insert hood.
– Remove bolt -1-.
– Unclip upper part of dash panel insert hood -2- in direction of arrow.



– The 3 screws -arrows- must be removed in order to remove the lower part of the dash panel insert hood -1-.



– Now both screws -arrows- securing the dash panel insert can be removed.
– Pull off connectors on dash panel insert.
– Take out dash panel insert.



3.2.2 Installing dash panel insert

Installation of dash panel insert is carried out in the reverse sequence.

3.3 Rear view of panel insert for vehicles 10.99 ➤

Note

- *The dash panel insert is equipped with a self-diagnosis which makes fault finding easier.*
- *The dash panel insert must not be dismantled.*

beforehand

18 - Wiper frame

19 - Hexagon bolt M6

20 - Crank

❑ Setting park position ⇒ page 63

21 - M8 hexagon nut

❑ 20 Nm

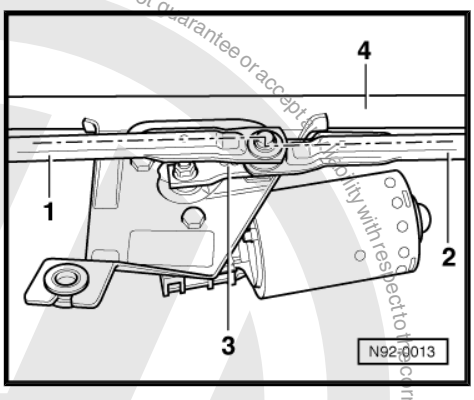
Setting park position

– Run wiper motor to park position and install.

– First press connecting rod -2- onto loose crank -3- and then press on connecting rod -1-.

– Align connecting rods -1- and -2- to centre line shown in illustration.

– Tighten nut on crank -3-.

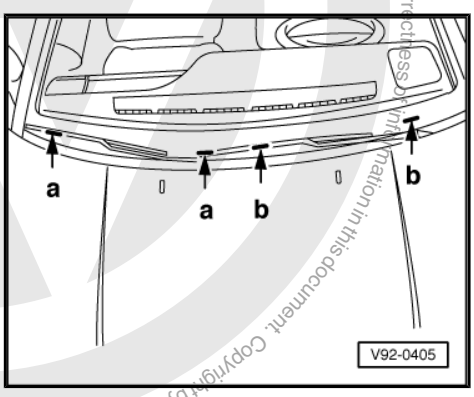


Adjusting wiper blade park position

– Set wiper blades at markings in windscreen.

a = Marking for left-hand drive vehicles

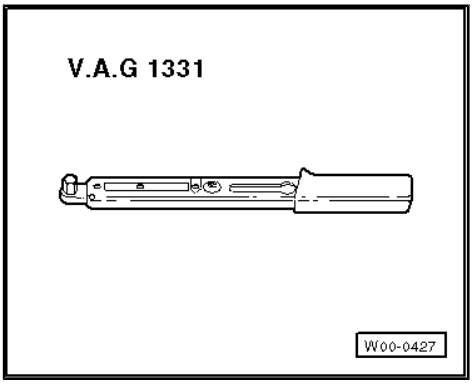
b = Marking for right-hand drive vehicles



1.2 Removing and installing window wiper system, vehicles 10.99 ▸

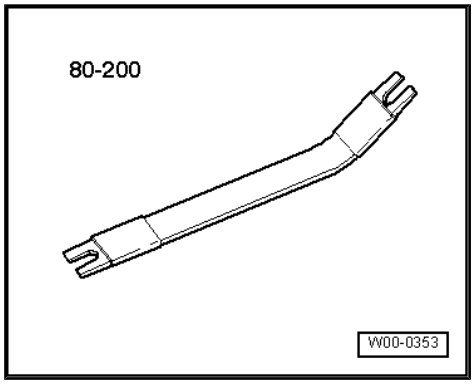
Special tools and workshop equipment required

♦ Torque wrench -V.A.G 1331-

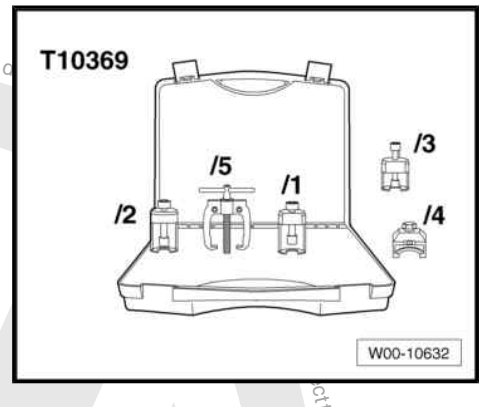


satelettronica

♦ Release lever -80-200-



♦ Puller -T10369-



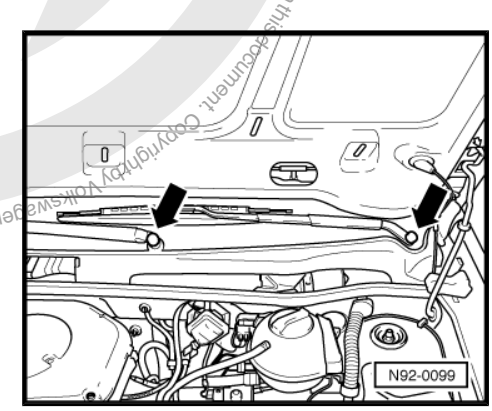
1.2.1 Removing wiper arms

Note

Before removing the wiper arms check that the wiper motor is in park position. Only then can the wiper arm park position be correctly set when installing.

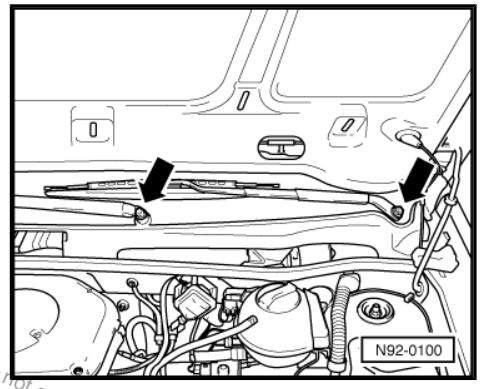
– Disconnect battery ⇒ page 4 .

– Lever off black cover caps -arrows- with a screwdriver.

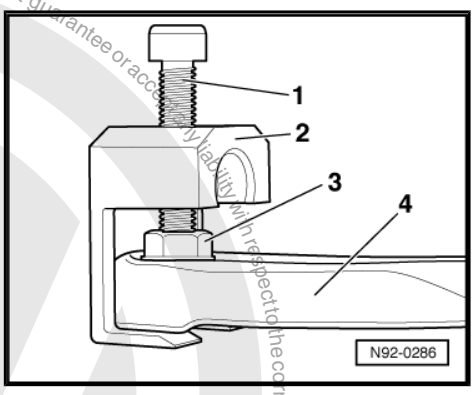


Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not make any representation or warranty regarding the accuracy or completeness of the information in this document. Copyright by Volkswagen AG.
satelettronica

– Loosen M8 hexagon nuts -arrows-, but do not remove completely.



– Slide legs of puller -T10369/1- -2- under wiper arm -4- as shown in the illustration.
– Turn thrust bolt -1- of puller clockwise until it comes into contact with the wiper shaft. The hexagon nut -3- previously loosened on the windscreen wiper arm serves as a means of centring and guiding the thrust bolt -1-.
– Turn thrust bolt -1- of puller clockwise using a 6 mm Allen key until wiper arm -4- is loosened from the shaft profile.

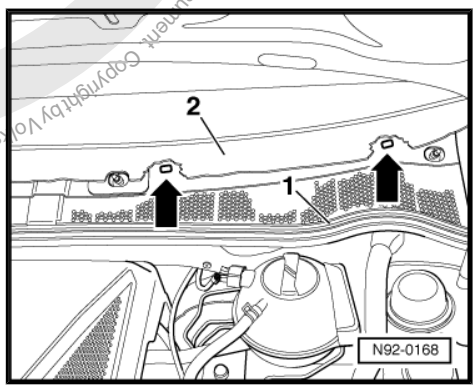


1.2.2 Removing plenum chamber cover

Note

The plenum chamber cover is divided in 2 parts. To remove the wiper frame with linkage and wiper motor, it is only necessary to remove the left side of the plenum chamber cover.

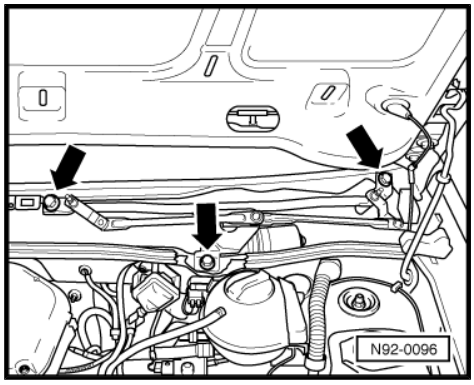
– Detach rubber strip -1- from left part till centre of vehicle.
– Fold rubber strip -2- in clip area -arrows- slightly upwards and remove clips.
– Carefully lever out plenum chamber cover upwards.



Protected by copyright. Copyright by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG. Reproduction, in whole or in part, for commercial purposes, in part or in whole, is not permitted without the express authorised by Volkswagen AG.
satelettronica

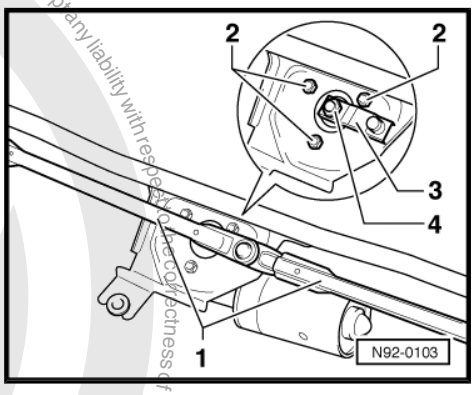
1.2.3 Removing wiper frame with linkage and wiper motor

– Remove M6 hexagon bolts -arrows- and take off washers.
– Pull connector off wiper motor.
– Now take out wiper frame complete.



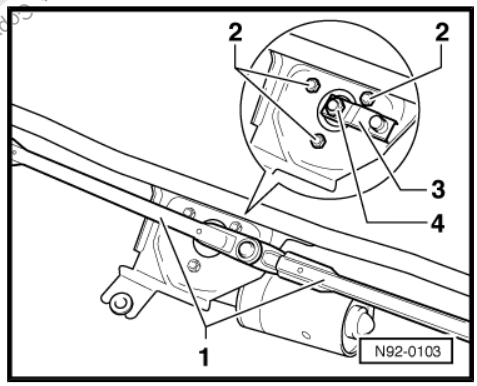
1.2.4 Removing wiper motor from wiper frame

– Lever rods -1- off crank -3- using removal lever 80-200.
– Remove M8 hexagon nut -4-.
– Remove crank -3-.
– Remove 3 M6 securing bolts -2- for wiper motor.



1.2.5 Installing wiper motor in wiper frame

– Connecting battery ⇒ page 4 .
– Run motor to park position by connecting connector and operating wiper switch briefly.
– Disconnect battery ⇒ page 4 .
– Disconnect connector again and secure motor by tightening M6 securing bolts -2-. Specified torque: 5 Nm

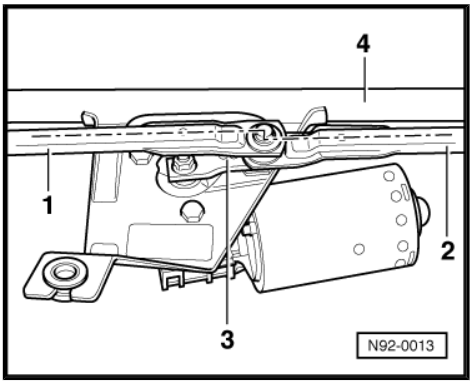


1.2.6 Setting park position

– Run wiper motor to park position and install.

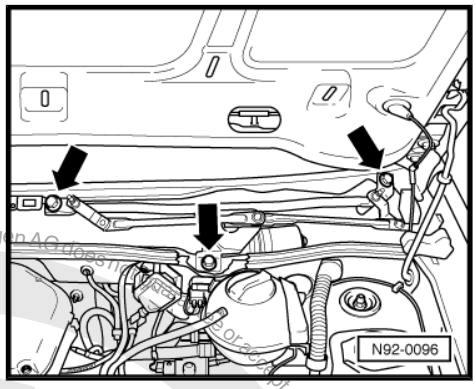
Protected by copyright. Copyright by Volkswagen AG.
Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document.
satelettronica

– First press connecting rod -2- onto loose crank -3- and then press on connecting rod -1-.
– Align connecting rods -1- and -2- to centre line shown in illustration.
– Tighten nut on crank -3-.



1.2.7 Installing wiper frame with linkage and wiper motor

– Insert wiper frame with wiper motor.
– Attach connector to wiper motor.
– Fit washers and tighten M6 hexagon bolts -arrows-.



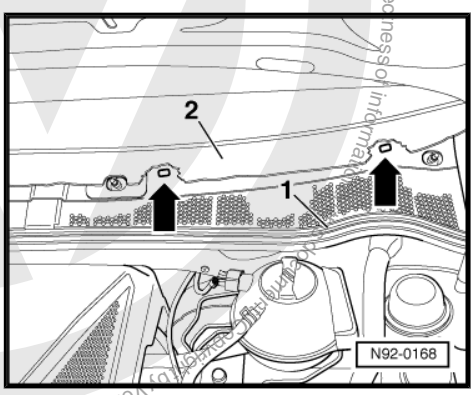
1.2.8 Installing plenum chamber cover

– Install plenum chamber cover.

Note

Left part of plenum chamber cover must be pushed under right part of plenum chamber cover.

– Insert clips -arrows- and fit rubber strip -arrows-.



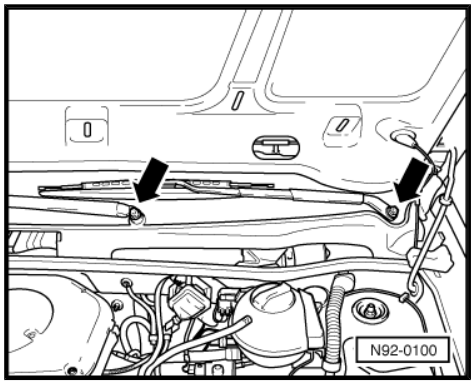
1.2.9 Installing wiper arms

– Fit wiper arms.
– Adjust wiper blade park position ⇒ page 68 .

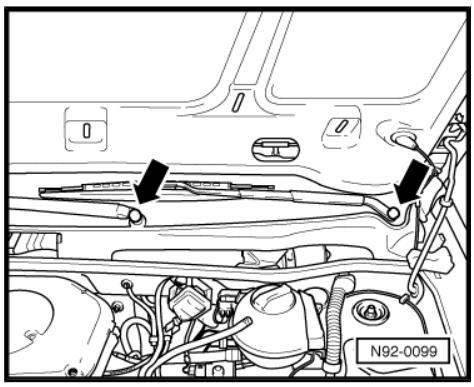
Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information. Copyright by Volkswagen AG.
satelettronica

– Tighten M8 hexagon nuts -arrows-.

Wiper arm torque setting: 20 Nm



– Fit black cover caps -arrows-.

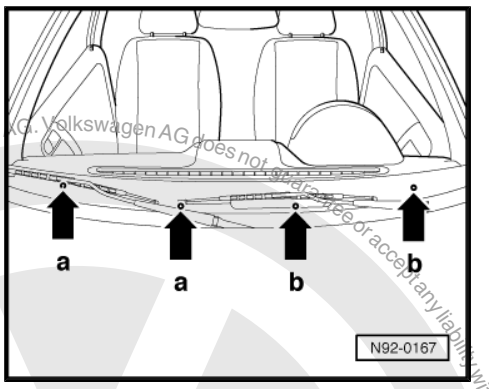


1.2.10 Adjusting wiper blade park position

– Set wiper blades at markings in windscreen.

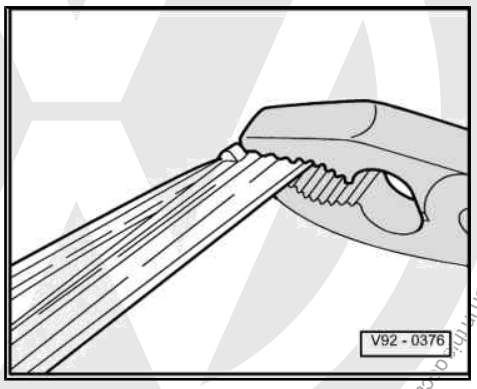
a = Marking for left-hand drive vehicles

b = Marking for right-hand drive vehicles



1.3 Removing and installing wiper rubber

– Using a pair of pliers, press together both steel strips on the enclosed side of the wiper rubber, slide sideways out of the upper clip and remove rubber complete with strips from the other clips of the wiper blades.



Protected by copyright. Copying for private or commercial purposes, in part or whole is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not warrant, guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

– Fit new rubber insert into lower clips of wiper blade.
– Guide both strips into the first groove of the rubber insert so that the recesses in the strips face the rubber and engage in the rubber lugs of the groove.
– Using pliers, press both steel strips and rubber together and insert into the upper clips so that the lugs of the clips on both sides engage in the retaining slots -arrow- of the wiper blade rubber insert.

2.3 Adjusting windscreen washer system spray jets

Note

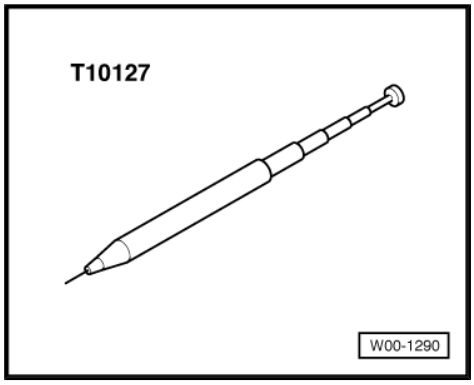
- *Renew spray jet if spray is irregular or cannot be adjusted to the prescribed setting.*
- *Never use a needle or similar object, as otherwise water passages in washer spray jets will be damaged!*

2.3.1 Spray jets without preadjustment

Special tools and workshop equipment required

satelettronica

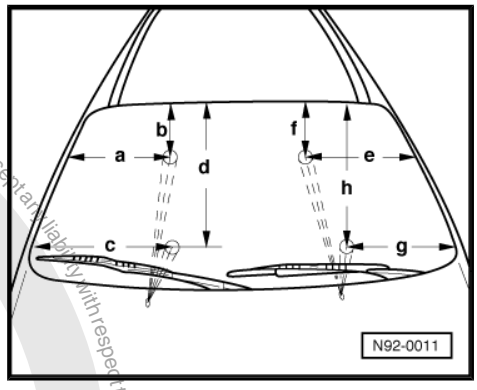
♦ Adjusting tool -T10127-



– Check jet settings and adjust spray jets if necessary using spray jet adjusting tool 3125 A.

a	280 mm	e	370 mm
b	290 mm	f	270 mm
c	430 mm	g	290 mm
d	560 mm	h	560 mm

Tolerance: ± 20 mm



2.3.2 Preadjusted spray jets (fan jet)

The spray jets are preset. However, small differences in height may be corrected.

Note

The spray jets must not be cleaned opposite to the direction of flow or blown through from the front.

If both spray fields are not at same height, adjust spray direction upwards or downwards as follows:

Note

Two different types of spray jets are available.

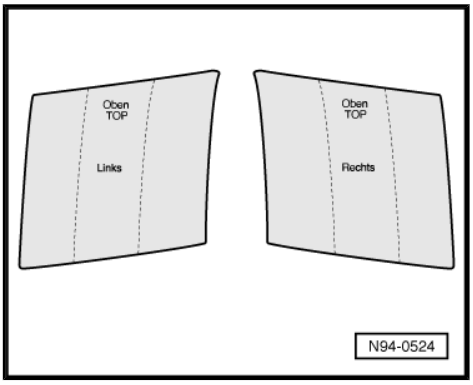
2.6 Headlight conversion for driving on left/ right

Note

- *The headlight conversion set comprises 2 pieces of film.*
- *The pieces of film are suitable for converting from driving on right to driving on left, and for converting from driving on left to driving on right.*
- *Clean headlight lens before converting.*

Protected copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

Film conversion set for Polo with normal headlights



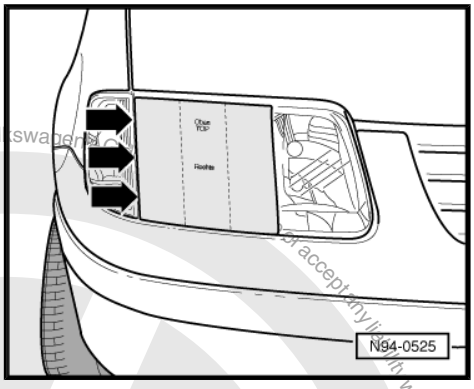
2.6.1 Conversion from driving on right to driving on left

(For vehicles from European countries driving on right with left-hand drive)

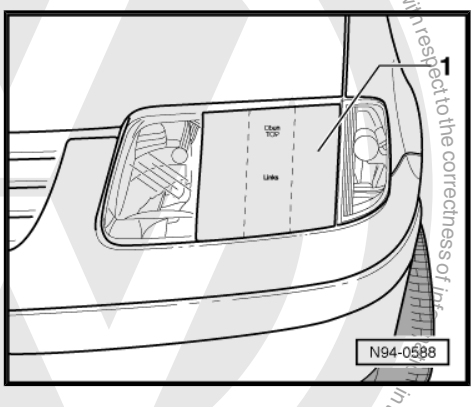
– For right headlight use film with lettering “Rechts” (right headlight) and for left headlight use film with lettering “Links” (left headlight).

– Remove protective paper from application film.

– Align application film on headlight so that the film edge with the lettering “Oben/ TOP” is positioned on the upper edge of the headlight. For this, the film must be simultaneously positioned along the headlight edge on the turn signal side -arrows-.

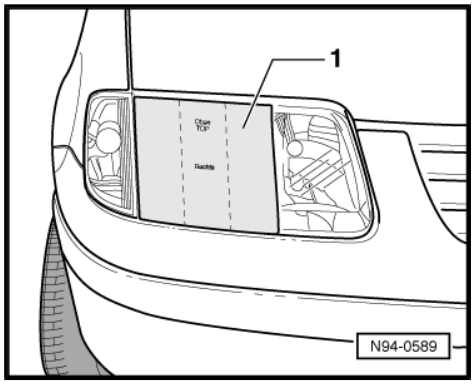


– Remove assembly film from left headlight. The masking film cut-out -1- remains on headlight.



Protected by copyright. Copying for private or commercial purposes, in part or in whole is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

– Remove assembly film from right headlight. The masking film cut-out -1- remains on headlight.



Note

Any adhesive material remaining on headlight plastic cover after removing the film should be removed with an alcohol or alcohol and water based cleanser. For example a cloth soaked with isopropyl alcohol.

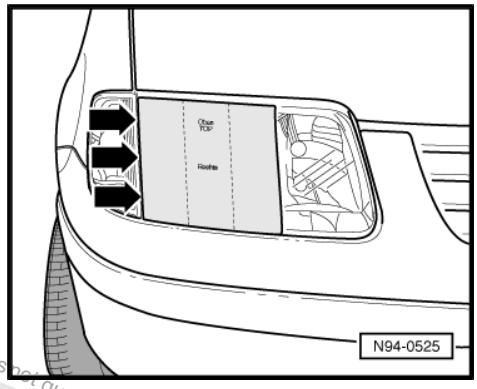
2.6.2 Conversion from driving on left to driving on right

(For vehicles from European countries driving on left with right-hand drive)

– For right headlight use film with lettering “Rechts” (right headlight) and for left headlight use film with lettering “Links” (left headlight).

– Remove protective paper from application film.

– Align application film on headlight so that the film edge with the lettering “Oben/ TOP” is positioned on the upper edge of the headlight. For this, the film must be simultaneously positioned along the headlight edge on the turn signal side -arrows-.



– Remove assembly film from left headlight. The masking film cut-out -1- remains on headlight.

3 Headlights with gas discharge bulbs

Note

- *To disconnect and reconnect the battery, the procedure described in the workshop manual should be strictly adhered to* *⇒ page 4* *.*
- *When the battery is reconnected, check the vehicle equipment (radio, clock, window regulators) as per Workshop Manual and/or the Owner's Manual.*
- *The headlight range control with gas discharge bulbs is equipped with self-diagnosis.*
- *When dealing with complaints, it is absolutely essential that the function and operation of the lighting system are first understood.*
- *Additional information ⇒ Operating instructions*

Fault finding

The automatic headlight range control for headlights with gas discharge bulbs is equipped with a self-diagnosis, which makes fault finding easier.

Use -VAS 5051- vehicle diagnostic, testing and information system -V.A.G 1551- for fault finding.

– Carry out self-diagnosis automatic headlight range control ⇒ Electrical system, self-diagnosis; Rep. Gr. 01 ; Self-diagnosis of automatic headlight range control; Carrying out self diagnosis of automatic headlight range control .

3.1 Assembly overview of headlights with gas discharge bulbs

Note

After any measures which could affect the headlight setting, the headlights must be checked and if necessary adjusted ⇒ Maintenance ; Booklet ; Descriptions of work .

satelettronica

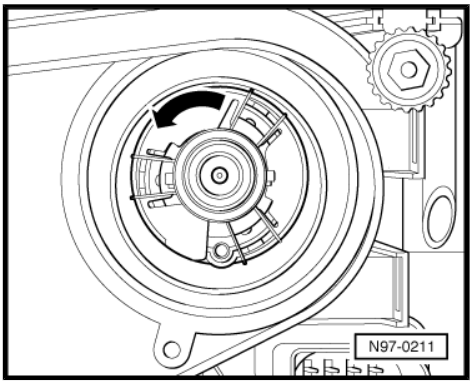
– Release retaining ring by turning in direction of arrow and remove.



> **WARNING**
>
> ***Always wear eye protection and gloves when removing and installing gas discharge bulb!***

Eye protection and gloves are necessary because the glass envelope of the gas discharge bulb is mechanically very sensitive and the interior of the bulb is under a pressure of 7 bar (cold) to 100 bar (warm) and the temperature around the glass envelope can reach up to 700 degrees Celsius.

– Carefully pull gas discharge bulb out of headlight housing.

Installing:

Installation is carried out in the reverse order. When installing observe the following:

> **Note**
>
> ♦ *Do not touch bulb glass when fitting a new gas discharge bulb. Fingers leave traces of grease on the glass envelope, which evaporate when the bulb is switched on and cause the glass envelope to cloud over.*
>
> ♦ *Ensure that the glass envelope is not stressed mechanically. The bulb glass is extremely fragile and has a high internal pressure.*
>
> ♦ *Avoid looking directly into the collimated beam as the UV rays from the gas discharge bulb are about 2.5 times greater than normal halogen bulbs.*

– Insert new bulb so that the lugs on the disc plate align with the recesses in the reflector.

– Insert retaining ring by turning in direction of arrow and lock.

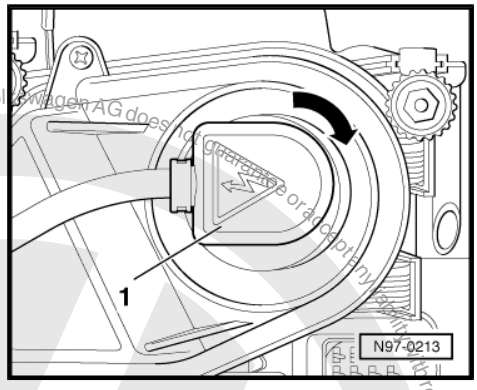
satelettronica

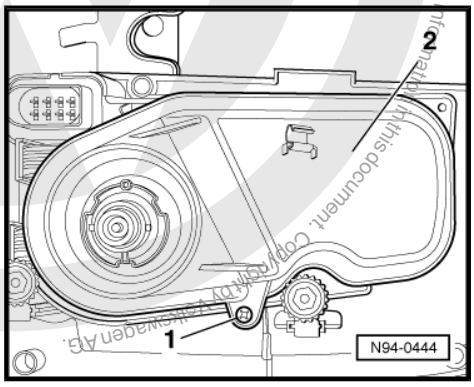
– Lock connector -1- by turning in direction of arrow.
– Check headlight settings and adjust if necessary ⇒ Maintenance ; Booklet ; Descriptions of work .
– Check function of headlight.



3.3.2 Renewing main beam bulb

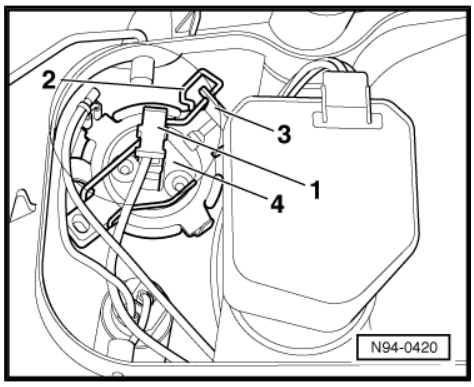
Removing:

– Disconnect battery ⇒ page 4 .
– Remove headlight ⇒ page 88 .
– Remove gas discharge bulb control unit ⇒ page 105 .
– Unscrew bolt -1- and remove cover cap -2-.



– Pull connector -1- off bulb.
– Unclip retaining clip -2- over retaining lug -3- and release.
– Pull bulb -4- out of reflector.

Installing:



Note

Do not touch glass envelope when fitting a new bulb. Fingers leave traces of grease on the glass envelope, which evaporate when the bulb is switched on and cause the glass envelope to cloud over.

– Insert new bulb so that the lugs on the disc plate align with the recesses in the reflector.

satelettronica

3.4 Removing and installing headlight range control motor for headlights with gas discharge bulb

Note

- *The control motor can only be removed and installed when the headlight housing has been removed.*
- *If control motors are renewed or removed and installed, the headlight adjustment must be checked and adjusted with adjusting device, if necessary ⇒ Maintenance ; Booklet ; Descriptions of work .*

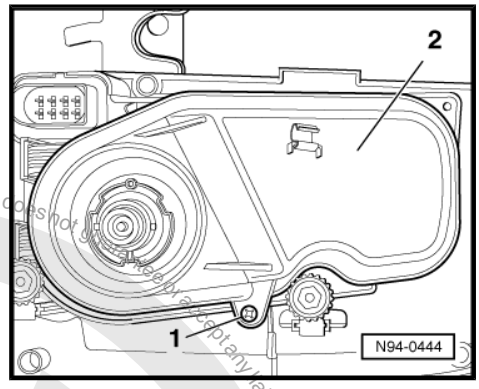
Removing:

– Disconnect battery ⇒ page 4 .

– Remove headlight ⇒ page 88 .

– Remove gas discharge bulb control unit ⇒ page 105 .

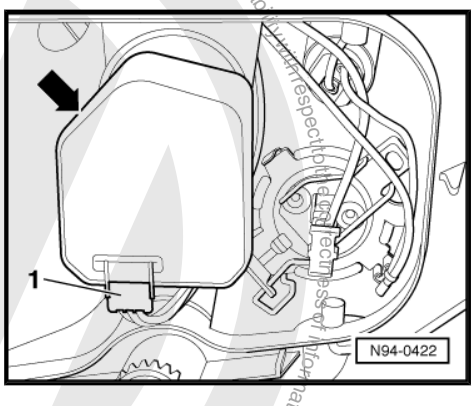
– Unscrew bolt -1- and remove cover cap -2-.



– Disconnect headlight range control motor connector -1-.

– Release left-hand headlight control motor -arrow- by turning to right and right-hand control motor by turning to left.

– Pull positioning pin ball head sideways out of guide on reflector.



Installing:

– Carefully insert positioning pin of control motor -1- into ball head guide -2-. Push up reflector base plate when doing so.

– Lock control motor in position by turning.

– Reconnect connectors.

– Fit sealing cap.

– Install gas discharge bulb control unit ⇒ page 105 .

– Install headlight ⇒ page 88 .

– Check function of headlight.

– Check headlight settings and adjust if necessary ⇒ Maintenance ; Booklet ; Descriptions of work .

satelettronica

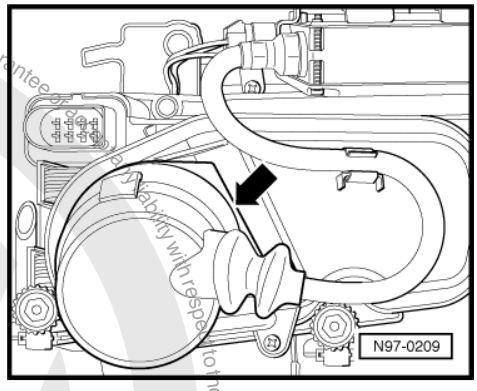
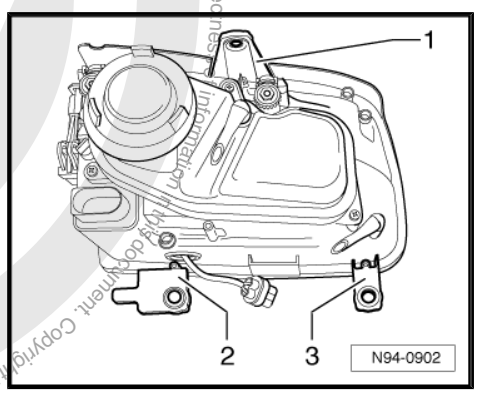
– Fit rubber cap -arrow- on headlight housing.
– Install headlight ⇒ page 88.
– Check headlight settings and adjust if necessary ⇒ Maintenance ; Booklet ; Descriptions of work .
– Check function of headlight.



3.6 Repairing retaining tabs on headlight

Note

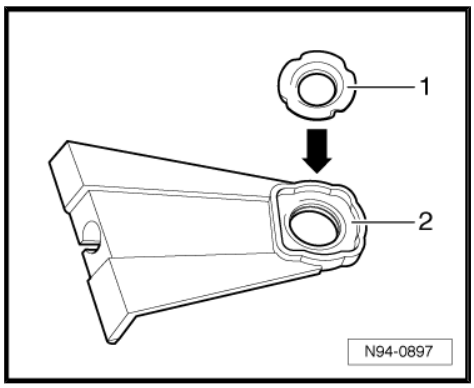
- *The prerequisite for repairing is that the headlight housing is not further damaged.*
- *To disconnect and reconnect the battery, the procedure described in the workshop manual should be strictly adhered to ⇒ page 4 .*
- *When the battery is reconnected, check the vehicle equipment (radio, clock, window regulators) as per Workshop Manual and/or the Owner's Manual.*
- *The left headlight is shown in the following illustration. On right headlight the components are a mirror image.*



1 - Repairing upper retaining tab ⇒ page 106
2 - Repairing lower left retaining tab ⇒ page 107
3 - Repairing lower right retaining tab ⇒ page 107

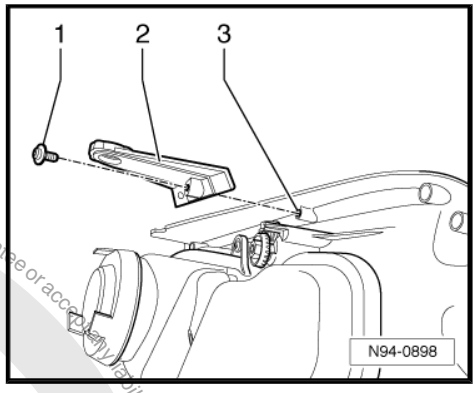
3.6.1 Repairing upper retaining tab

– Disconnect battery ⇒ page 4 .
– Remove headlight ⇒ page 88 .
– Insert reinforcing ring -1- in direction of arrow into replacement part retaining tab -2-.
– Sand headlight retaining tab base on headlight down flat at breakage point.



Copyright by Volkswagen AG. Volkswagen AG does not guarantee or assume any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

– Position replacement part retaining tab -2- on headlight retaining tab base -3- and secure with bolt -1-.
– Install headlight ⇒ page 88 .
– Check headlight settings and adjust if necessary ⇒ Maintenance ; Booklet ; Descriptions of work .
– Check function of headlight.



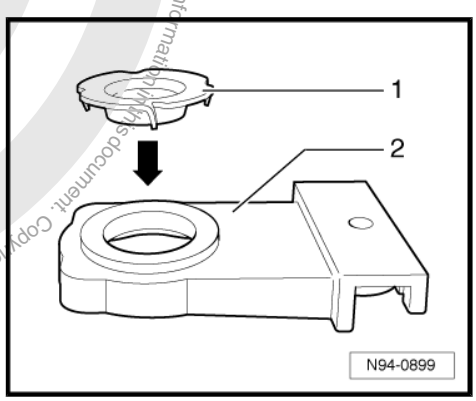
3.6.2 Repairing lower left retaining tab

– Disconnect battery ⇒ page 4 .
– Remove headlight ⇒ page 88 .

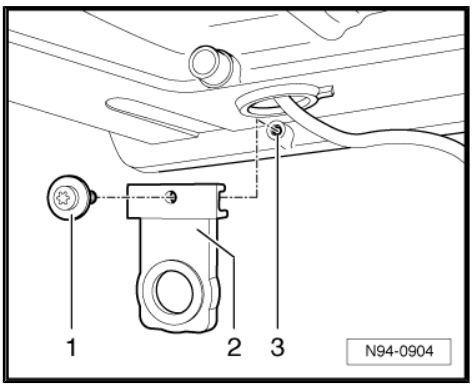
Note

The form of the retaining tab of the repair kit differs from the form of the original.

– Insert reinforcing ring -1- in direction of arrow into replacement part retaining tab -2-.
– Sand headlight retaining tab base on headlight down flat at breakage point.



– Position replacement part retaining tab -2- on headlight retaining tab base -3- and secure with bolt -1-.
– Install headlight ⇒ page 88 .
– Check headlight settings and adjust if necessary ⇒ Maintenance ; Booklet ; Descriptions of work .
– Check function of headlight.



3.6.3 Repairing lower right retaining tab

– Disconnect battery ⇒ page 4 .
– Remove headlight ⇒ page 88 .

4 Fog lights

4.1 Removing and installing fog lights, vehicles ▸ 09.99

4.1.1 Vehicles with small bumper

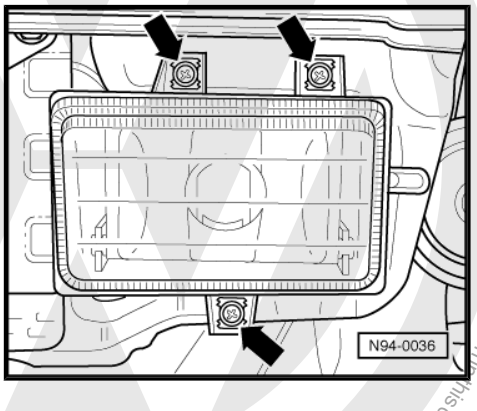
Removing:

– Switch off ignition and all electrical consumers and remove ignition key.

– Remove skirt ⇒ General body repairs, exterior; Rep. Gr. 50 ; Body, front .

– Remove securing bolts -arrows-.

– Pull fog light housing out of bumper and disconnect connector.



Installing:

Installation is carried out in the reverse order. When installing observe the following:

– Check fog light settings and adjust if necessary ⇒ Maintenance ; Booklet ; Descriptions of work .

– Check function of headlight.

4.1.2 Vehicles with large bumper

Removing:

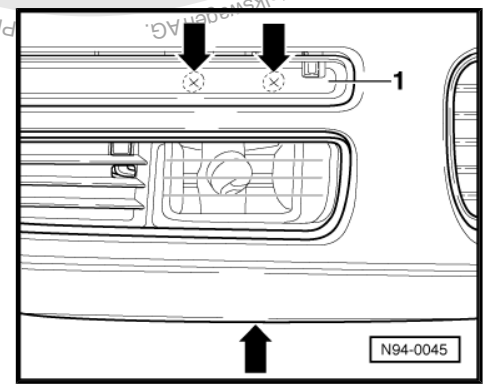
– Switch off ignition and all electrical consumers and remove ignition key.

– Unclip cover -1-.

– Remove bumper ⇒ General body repairs, exterior; Rep. Gr. 63 ; Front bumper .

– Remove securing bolts -arrows-.

– Pull fog light housing out backwards of bumper and disconnect connector.



Installing:

Installation is carried out in the reverse order. When installing observe the following:

– Check fog light settings and adjust if necessary ⇒ Maintenance ; Booklet ; Descriptions of work .

– Check function of headlight.

4.2 Removing and installing fog lights, vehicles 10.99 ▸

Removing:

– Switch off ignition and all electrical consumers and remove ignition key.

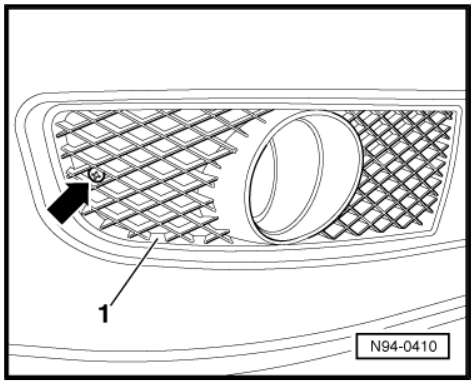
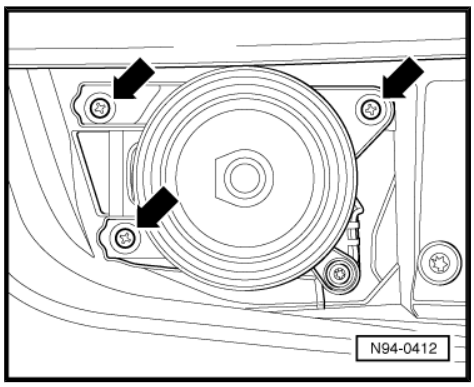
satelettronica

– Unscrew cross-head screw -arrow- and remove trim -1-.



– Remove securing bolts -arrows-.

– Pull fog light housing forwards out of bumper and disconnect connector.



Installing:

Installation is carried out in the reverse order. When installing observe the following:

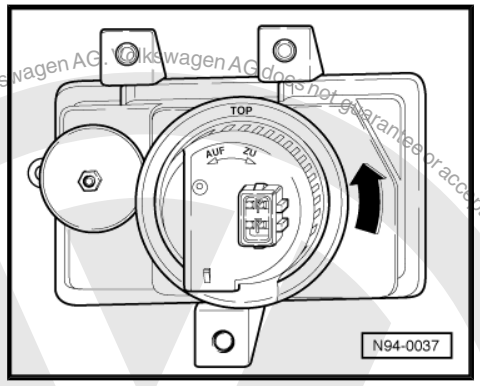
– Check fog light settings and adjust if necessary ⇒ Maintenance ; Booklet ; Descriptions of work .

– Check function of headlight.

4.3 Removing and installing fog light bulb, vehicles ▸ 09.99

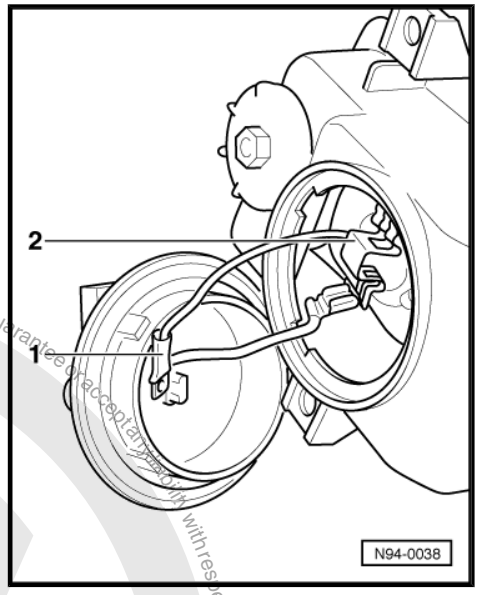
Removing:

– Turn cover cap in direction of arrow and remove.



Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

– Disconnect connector -1- of H3 halogen bulb (12 V/55 W) in cover cap.
– Unclip retaining clip -2- over retaining lugs -3- and swing out.
– Pull bulb out of housing.



Installing:

Installation is carried out in the reverse order. When installing observe the following:

Note

Do not touch glass envelope when fitting a new bulb. Fingers leave traces of grease on the glass envelope, which evaporate when the bulb is switched on and cause the glass envelope to cloud over.

– Insert bulb so that recess in bulb carrier aligns with guide lug of housing.
– Check fog light settings and adjust if necessary ⇒ Maintenance ; Booklet ; Descriptions of work .
– Check function of headlight.

4.4 Removing and installing fog light bulb, vehicles 10.99 ▸

Removing:

– Disconnect connector on fog light.
– Release spring clip -arrow- and remove cover cap.

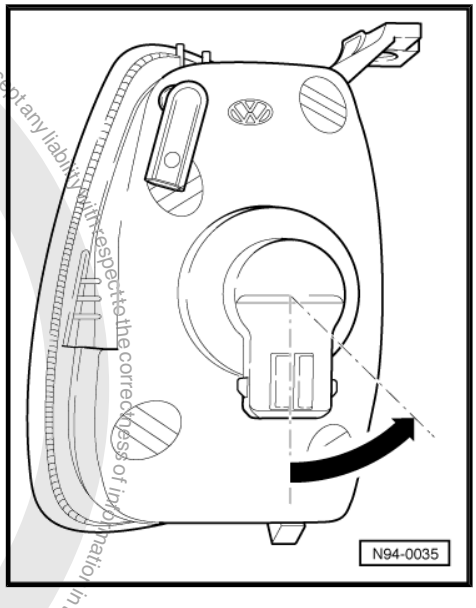
5.3 Renewing turn signal bulb, vehicles ▸ 09.99

Removing:

– Turn bulb carrier in direction of arrow and pull out of housing.

– Remove bulb from holder.

Installing:



Note

Do not touch glass envelope when fitting a new bulb. Fingers leave traces of grease on the glass envelope, which evaporate when the bulb is switched on and cause the glass envelope to cloud over.

Ensure, when installing, that the bulb carrier engages correctly in the bulb housing when turning opposite to direction of arrow.

5.4 Renewing turn light signal bulb, vehicles 10.99 ▸

Removing:

– Remove front turn signal ⇒ page 113 .

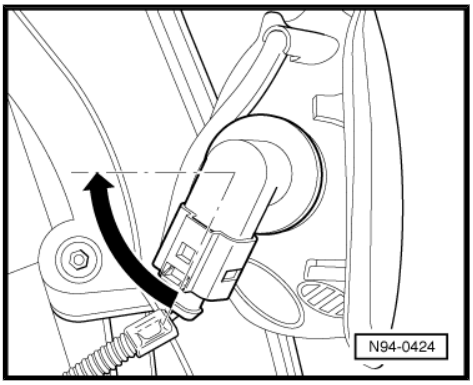
Note

The turn signal connector does not have to be released when renewing the bulb.

– Turn bulb carrier in direction of arrow and pull out of housing.

– Remove bulb from holder.

Installing:



Note

Do not touch glass envelope when fitting a new bulb. Fingers leave traces of grease on the glass envelope, which evaporate when the bulb is switched on and cause the glass envelope to cloud over.

Ensure, when installing, that the bulb carrier engages correctly in the bulb housing when turning opposite to direction of arrow.

satelettronica

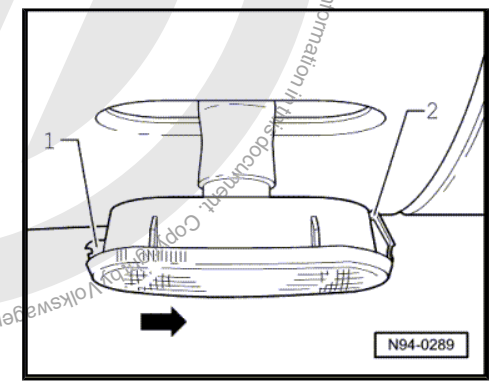
6 Turn signal repeater

6.1 Removing and installing turn signal repeater

Removing:

Note

Extreme caution must be exercised when removing the turn signal repeater, as removing is only possible in one direction and, when installed, it is not possible to recognise the side of the turn signal on which the mounting point or the spring clip are located. Attempting to lever out the light on the spring clip side by force runs the risk of damaging the turn signal or the vehicle paintwork.



- Press turn signal with a suitable tool on the mounting side -1- carefully in direction of arrow against the force of the spring clip -2- on the opposite side, and remove (protect paintwork surface with adhesive tape first if necessary).
- Pull rubber holder with push-fit bulb off bulb housing.
- Pull push-fit bulb (12 V/5 W) out of holder (do not turn).

Installing:

Note

Do not touch glass envelope when fitting a new bulb. Fingers leave traces of grease on the glass envelope, which evaporate when the bulb is switched on and cause the glass envelope to cloud over.

- Fit rubber holder with push-fit bulb onto bulb housing.
- Insert turn signal in wing.
- Check function of turn signal.

2.3 Removing and installing light switch, vehicles ▸ 09.99

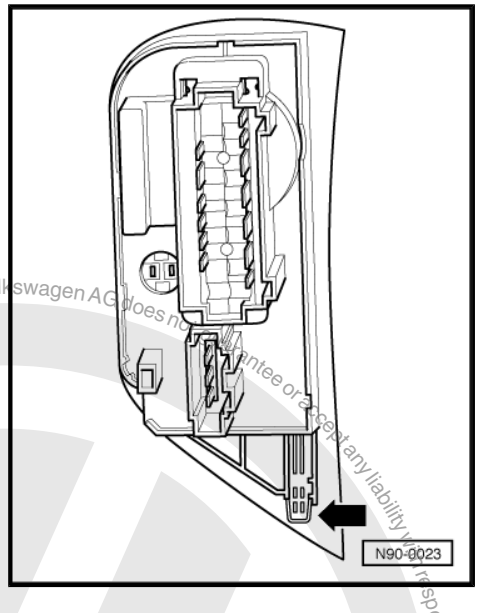
Removing:

– Install driver side storage compartment ⇒ General body repairs, interior; Rep. Gr. 68 .

– Push lower retainer -arrow- upwards.
– Pull light switch out of dash panel.
– Disconnect connector.

Installing:

– Reconnect connector.
– Insert light switch into dash panel and engage.
– Install driver storage compartment.



2.4 Removing and installing light switch, vehicles 10.99 ▸

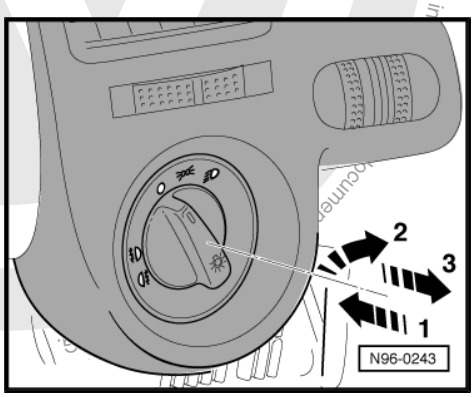
Removing:

Carry out following procedures:

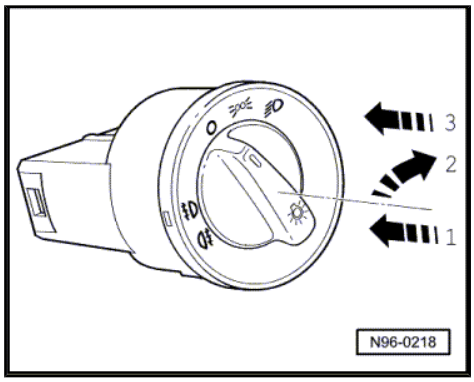
– Turn rotary position indicator of light switch to position '0'.
– Press rotary position indicator of light switch firmly inwards-1- and turn slightly to right -2-
– Hold rotary grip in this position and pull light switch out of dash panel using rotary grip -3-.
– Release and disconnect connectors.

Installing:

– Reconnect connectors.



– Hold light switch and press rotary part of light switch firmly inwards -1- and turn slightly to right -2-.
– Hold rotary grip in this position and insert light switch in dash panel -3-.
– Turn grip to position '0', release and engage switch.



Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document.

2.7 Removing and installing switches in centre of dash panel, vehicles 10.99 ▸

Removing and installing

- ♦ Heated rear window switch
- ♦ Heated seat regulator
- ♦ Switches for other optional equipment

is the same for all switches and is described for only one switch.

Removing:

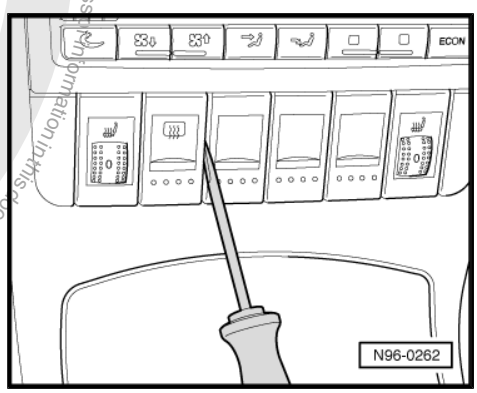
– Insert plain slot screwdriver between dash panel and switch and carefully release switch.

– Take out switch to the front.

– Disconnect connector.

Installing:

Installation is carried out in reverse order of removal.



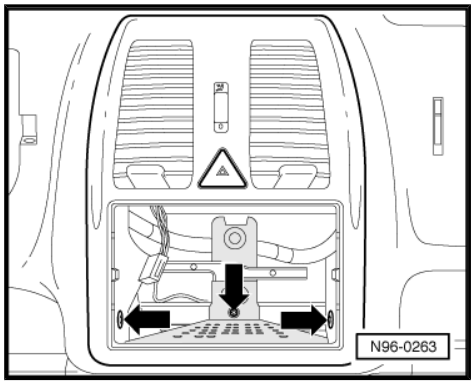
2.8 Removing and installing hazard warning light switch -E3- , vehicles 10.99 ▸

Removing:

– Remove radio or radio navigation system ⇒ Radio, telephone, navigation; Rep. Gr. 91 .

– Remove Torx bolts -arrows- and pull centre vent out slightly.

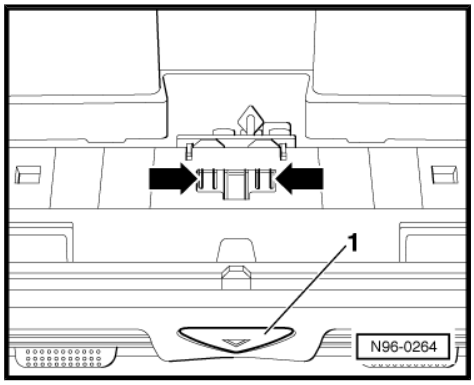
– Disconnect connector from hazard warning light switch.



– Push spring clip down on lugs -arrows- and push hazard warning light switch -1- out to rear.

Installing:

Installation is carried out in reverse order of removal.



satelettronica

2.9 Removing and installing interior light, vehicles 10.99 ▸

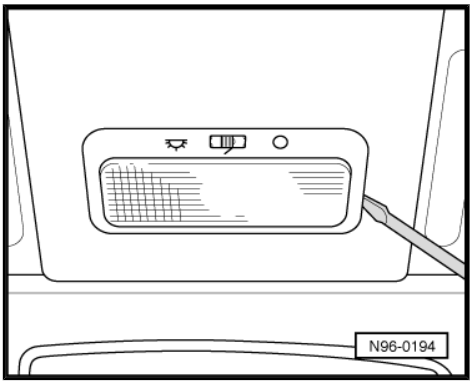
Removing:

– Lever interior light carefully out of roof trim using a plain slot screwdriver.

– Release connector and pull off.

Installing:

Installation is carried out in reverse order of removal.

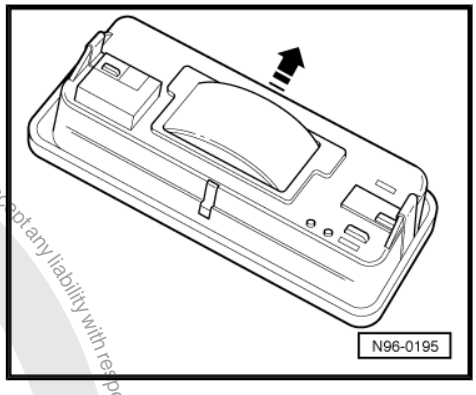


2.9.1 Renewing interior light bulb:

– Remove interior light.

– Release bulb cover by pressing sides and slide off to side -arrow-.

– Renew 12 V/10 W festoon bulb.

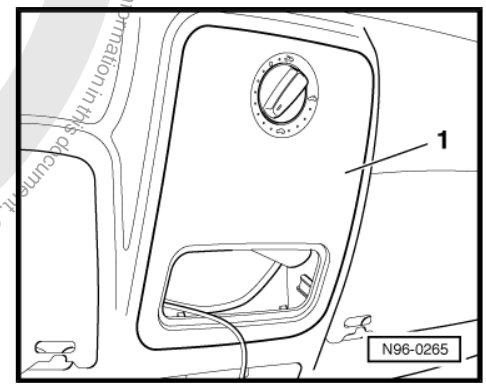


2.10 Removing and installing sliding sunroof adjustment regulator -E139- , vehicles 10.99 ▸

Removing:

– Remove interior light ⇒ page 151

– Remove cover -1- downwards.



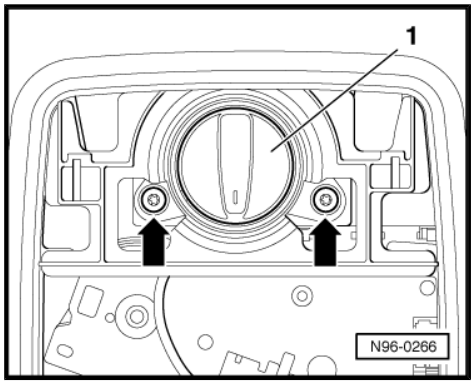
Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

– Remove Torx bolts -arrows- and remove sliding sunroof adjustment regulator -1- downwards.

– Disconnect connector.

Installing:

Installation is carried out in reverse order of removal.



2.11 Removing and installing window regulator switches, vehicles 10.99 ▸

2.11.1 Removing and installing window regulator switches in driver door

Removing:

Carry out following procedures:

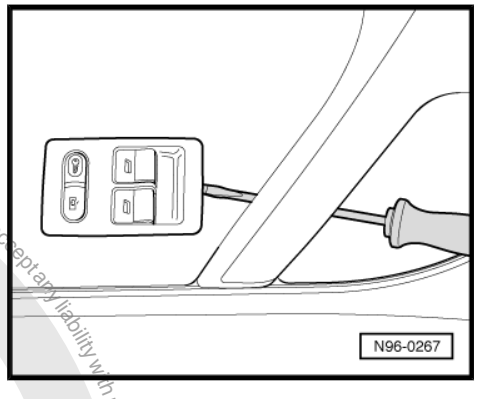
– Carefully release spring tension of switch housing with a plain slot screwdriver and pull out switch unit upwards.

– Disconnect connectors.

– Push window regulator switch downwards out of switch housing.

Installing:

Installation is carried out in reverse order of removal.



2.11.2 Removing and installing window regulator switches in front passenger's door and rear doors

Removing and installing

- Front right window regulator switch -E41-
- Rear left window regulator switch -E52-
- Rear right window regulator switch -E54-

is performed in the same way for all switches and is described only for the front right window regulator switch -E41- .

Removing:

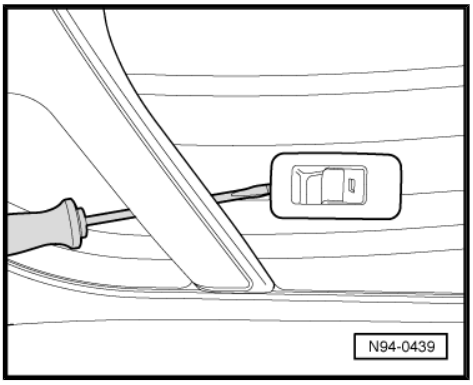
Carry out following procedures:

Protected by copyright. Copying for private or commercial purposes, in part or in whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.
satelettronica

– Carefully release spring tension of switch housing with a plain slot screwdriver and pull out upwards.
– Disconnect connector.
– Push window regulator switch downwards out of housing.

Installing:

Installation is carried out in reverse order of removal.



2.12 Removing and installing mirror adjustment switch -E43- with mirror adjustment change-over switch -E48- , vehicles 10.99 ▸

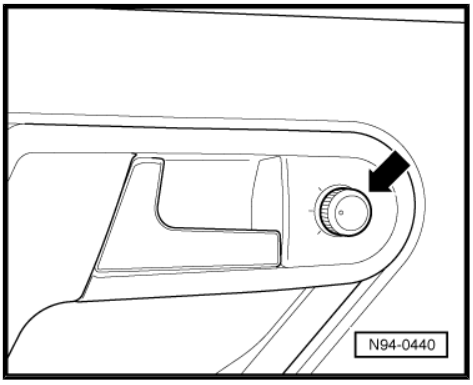
Removing:

Carry out following procedures:

– Take out mirror adjustment switch -arrow- forwards.
– Disconnect connector.

Installing:

Installation is carried out in reverse order of removal.



2.13 Removing and installing door contact switch, vehicles 10.99 ▸

Removing and installing

- Driver door contact switch -F2-
- Front passenger door contact switch -F3-
- Rear left door contact switch -F10-
- Rear right door contact switch -F11-

Is performed in the same way for all switches and is described only for the front passenger door contact switch -F3- .

97 – Wiring

1 Removing and installing relay carrier, coupling station and fuse holder

Protected by copyright. Copying for private or commercial purposes, in part or whole, is not permitted unless authorised by Volkswagen AG. Volkswagen AG does not guarantee or accept any liability with respect to the correctness of information in this document. Copyright by Volkswagen AG.

Note

- *To disconnect and reconnect the battery, the procedure described in the workshop manual should be strictly adhered to* *⇒ page 4* *.*
- *If the vehicle has a radio with anti-theft coding, obtain code before disconnecting battery.*
- *When the battery is reconnected, check the vehicle equipment (radio, clock, window regulators) as per Workshop Manual and/or the Owner's Manual.*

1.1 Removing and installing relay plate, vehicles ▸ 1997

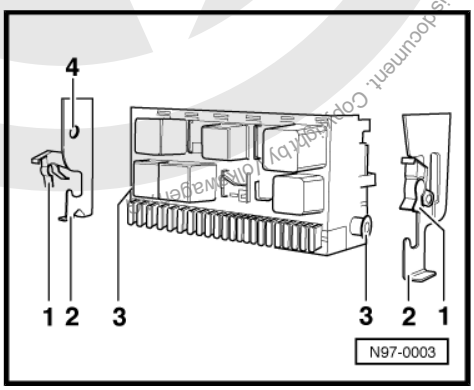
Removing:

– Disconnect battery ⇒ page 4 .

– Remove driver side storage compartment ⇒ General body repairs, interior; Rep. Gr. 68 .

– Release securing clips -1- from pins -3- on left and right of relay plate and swing upwards.

– Press left retaining arm -2- outwards, until the locking device on the relay plate is pulled out of the hole -4- of the retaining arm. Then unhook relay plate.



Installing:

Installation is carried out in the reverse order. When installing observe the following:

When installing, ensure the relay plate locking device engages in the hole -4- of the retaining arm. The securing clips -1- engage on the pins -3-.

1.2 Removing and installing multi-pin connector on back of relay plate, vehicle ▸ 1997

Note

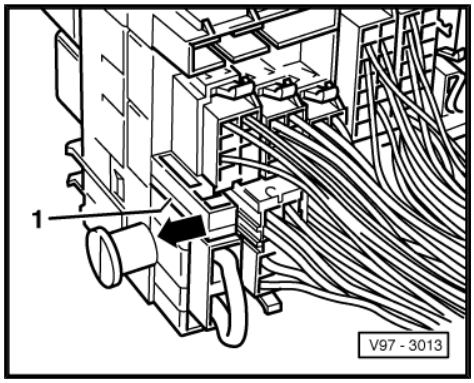
Multi-pin connector pin assignment ⇒ Current flow diagrams, Electrical fault finding and Fitting locations

Remove multi-pin connector:

– Disconnect battery ⇒ page 4 .

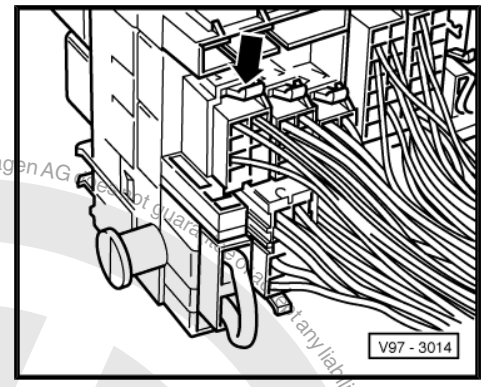
satelettronica

– Pull locking slide -1- on back of relay plate out of housing onto stop (approx. 5 mm) -arrow-.



– Press fasteners on multi-pin connector -arrow- and pull multi-pin connector out of relay plate.

Install multi-pin connector:



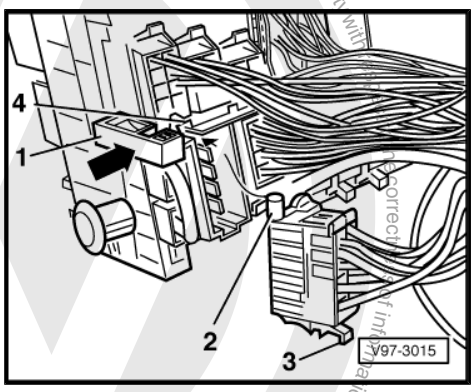
Note

Insert multi-pin connector so that the locking pins -2- face towards the locking slide -1-.

– Insert multi-pin connector into respective slot onto stop so that locking pin -2- is inserted into cut-out -4- and press inwards until locking lug -3- engages.

– Press locking slide -1- onto stop -arrow-. This is only possible when all multi-pin connectors are installed so that each locking lug -3- is inserted and engaged.

– Connecting battery ⇒ page 4 .



1.3 Removing and installing fuse holder and relay carrier, vehicles 1998 ▸ 09.99

Vehicles 1998 ▸ are equipped with 2 fuse holders. One of the fuse holders is located in the front left footwell, the other is located on the battery.

1.4 Removing and installing relay carrier in front left footwell, vehicles 1998 ▸ 09.99

Removing:

– Disconnect battery ⇒ page 4 .

– Remove dash panel trim on driver side footwell ⇒ General body repairs, interior; Rep. Gr. 70 .

– Release all fasteners of multi-pin connectors and disconnect connectors.

– Pull out relays and control units.

– Release all threaded terminals of lines located on the underside.

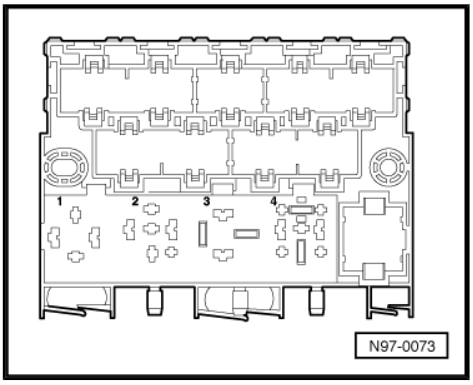
– Remove securing bolts.

satelettronica

– Remove coupling station with relay carrier downwards.

Installing:

Installation is carried out in reverse order of removal.



1.5 Removing and installing fuse holder in front left footwell, vehicles 1998 ▸ 09.99

Removing:

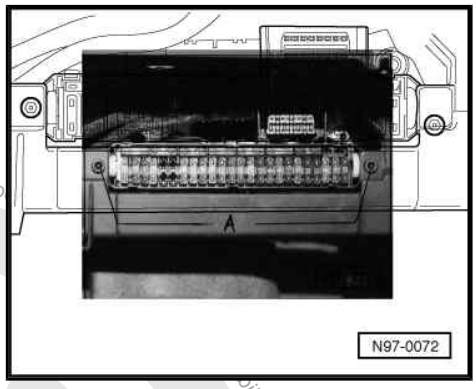
– Disconnect battery ⇒ page 4 .

– Remove dash panel trim on driver side footwell ⇒ General body repairs, interior; Rep. Gr. 70 .

– Remove both securing bolts -A-.

Installing:

Installation is carried out in reverse order of removal.



1.6 Removing and installing relay carrier, vehicles 10.99 ▸

Removing:

– Disconnect battery ⇒ page 4 .

– Remove bolt -1- and take off cover -2-.

– Remove bolts -arrows- from driver side storage compartment -3-.

– Take out driver side storage compartment -3-.

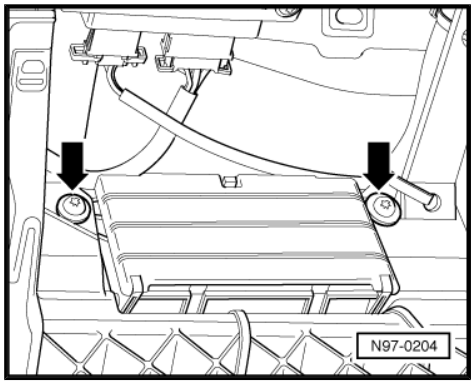
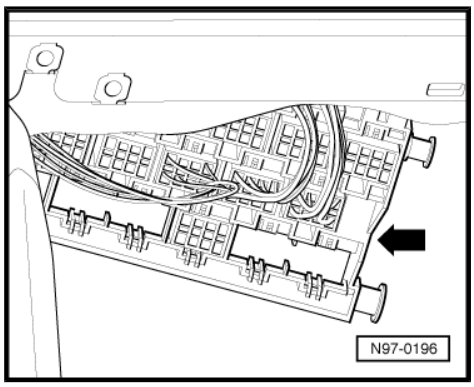
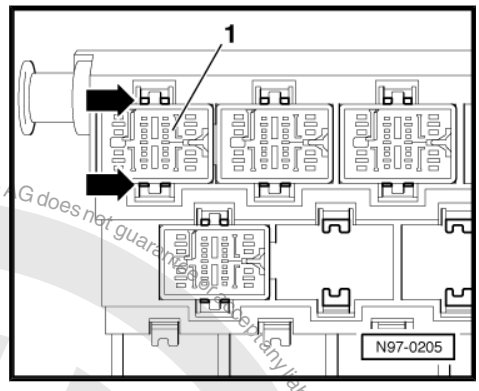
– Remove bolts -arrows- for securing fuse holder.



– Detach coupling station -arrow- below relay carrier and pull down slightly.
– Disconnect all multi-pin connectors.



– To unclip multi-pin connector: release retaining lugs -arrows- and push connector -1- out to rear out of coupling station.
– Take coupling station out downwards.
– Detach cable tie from wiring harness of fuse holder.



– Pull fuse holder -arrow- downwards slightly.
– Pull relays and control units off relay carrier.

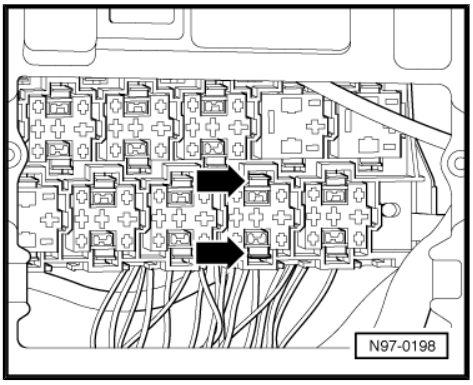
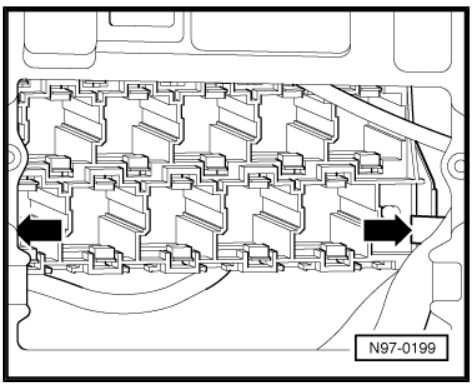
satelettronica

– Press retaining lugs -arrows- outwards and press relay socket to rear out of relay carrier.



– Unclip relay carrier on left and right -arrows-.
– Take relay carrier out downwards.



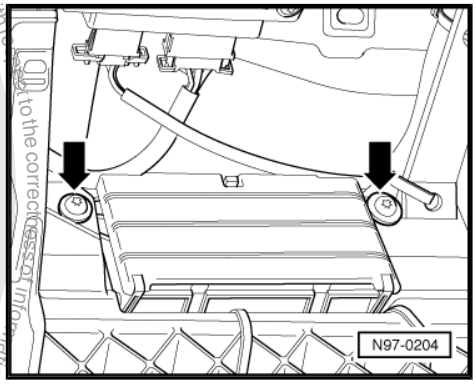
Installing:

– Insert relay carrier and clip-in on left and right -arrows-.
– Insert relay socket into relay carrier from behind and engage.

Note

Relay carrier assignment ⇒ Current flow diagrams, Electrical fault finding and Fitting locations

– Install relays and control units.
– Insert fuse holder and tighten bolts -arrows-.
– Install multi-pin connector and insert coupling station.



Note

Multi-pin connector pin assignment ⇒ Current flow diagrams, Electrical fault finding and Fitting locations

– Install driver side storage compartment -3-.
– Tighten securing bolts -arrows- for driver side storage compartment -3-.
– Install cover -2- and tighten bolt -1-.
– Connecting battery ⇒ page 4 .

1.7 Removing and installing coupling station below relay carrier, vehicles 10.99 ▸

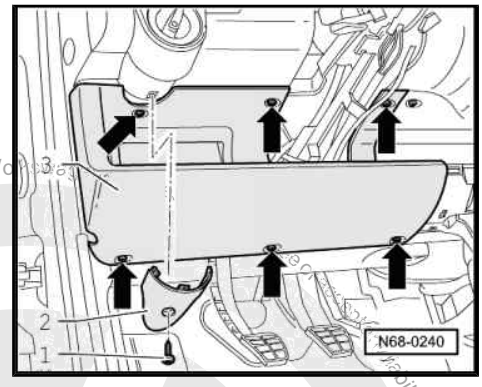
Removing:

– Disconnect battery ⇒ page 4 .

– Remove bolt -1- and take off cover -2-.

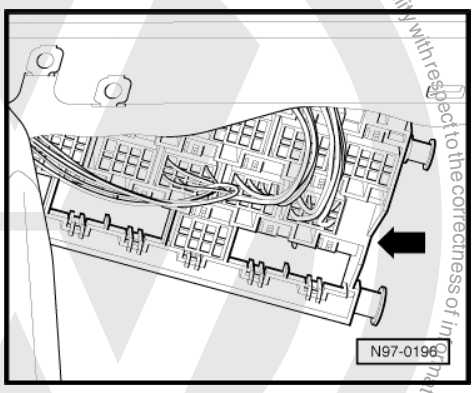
– Remove bolts -arrows- from driver side storage compartment -3-.

– Take out driver side storage compartment -3-.



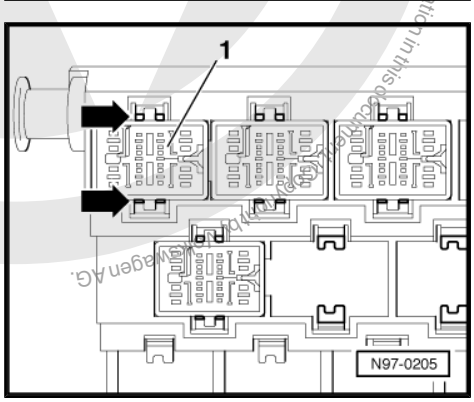
– Detach coupling station -arrow- below relay carrier and pull down slightly.

– Disconnect all multi-pin connectors.



– To unclip multi-pin connector: release retaining lugs -arrows- and push connector -1- out to rear out of coupling station.

– Take coupling station out downwards.



Installing:

– Install multi-pin connector and insert coupling station.

Note

Multi-pin connector pin assignment ⇒ Current flow diagrams, Electrical fault finding and Fitting locations

– Install driver side storage compartment -3-.

– Tighten securing bolts -arrows- for driver side storage compartment -3-.

– Install cover -2- and tighten bolt -1-.

– Connecting battery ⇒ page 4 .

1.8 Removing and installing fuse holder in front left footwell, vehicles 10.99 ➤

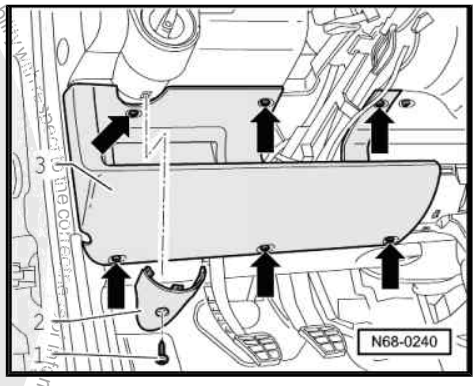
Removing:

– Disconnect battery ⇒ page 4 .

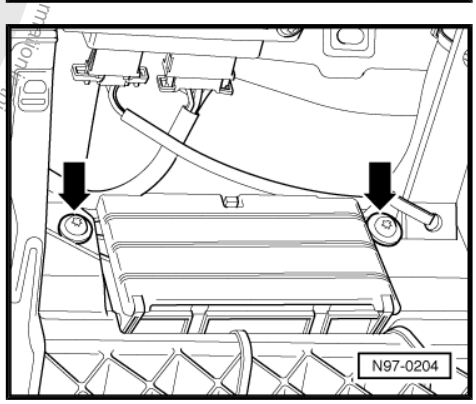
– Remove bolt -1- and take off cover -2-.

– Remove bolts -arrows- from driver side storage compartment -3-.

– Take out driver side storage compartment -3-.

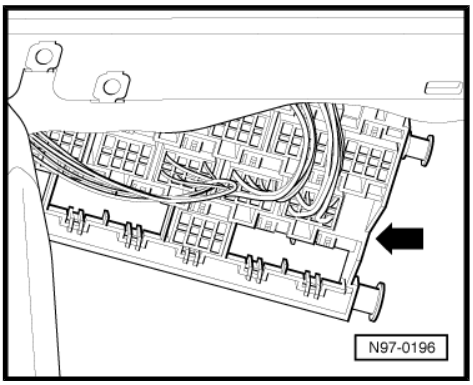


– Remove bolts -arrows- for securing fuse holder.



– Detach coupling station -arrow- below relay carrier and pull down slightly.

– Disconnect all multi-pin connectors.



– To unclip multi-pin connector: release retaining lugs -arrows- and push connector -1- out to rear out of coupling station.

– Take coupling station out downwards.

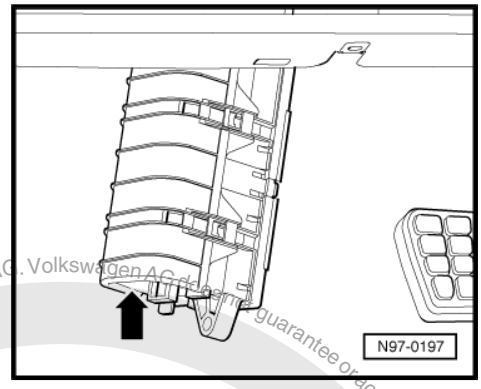
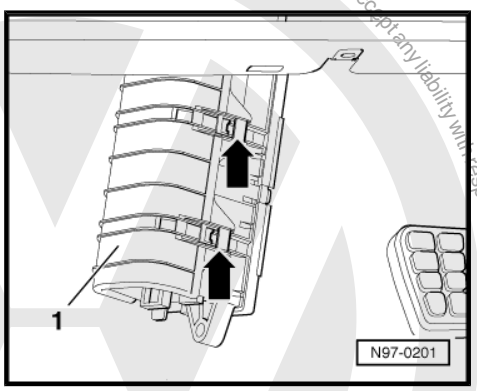
satelettronica

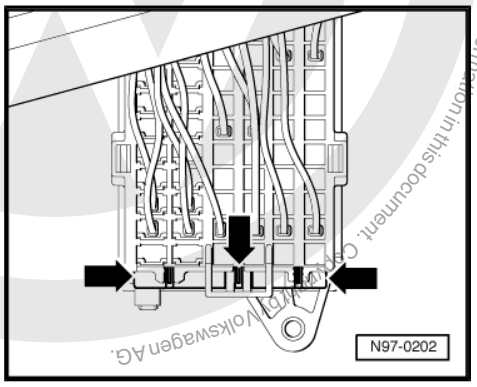
– Pull fuse holder -arrow- downwards slightly.



– Press locking lugs -arrows- together and remove cover -1-.
– Take fuses out of fuse holder.



– Pull locking slide -arrows- on the back of the fuse holder out of housing onto stop.
– Pull wiring out of fuse holder.



Installing:

Installation is carried out in the reverse order. When installing observe the following:

Note

Fuse holder assignment ⇒ Current flow diagrams, Electrical fault finding and Fitting locations
